## The Commonwealth of Massachusetts.

STATE HOUSE, BOSTON, July 25, 1918.

To His Excellency the Governor and the Honorable Council.

The undersigned, members of the Massachusetts Commission on Mental Diseases, respectfully submit the second annual report of the Commission for the year ending Nov. 30, 1917. The matters, however, relating to general statistics cover the year ending September 30.

> GEORGE M. KLINE. JOHN B. TIVNAN. HENRY M. POLLOCK. CHAS. G. DEWEY. ELMER A. STEVENS.

### The Commonwealth of Massachusetts.

# REPORT OF THE MASSACHUSETTS COMMISSION ON MENTAL DISEASES.

#### DUTIES OF THE COMMISSION.

The Massachusetts Commission on Mental Diseases was established by chapter 285 of the General Acts of 1916, succeeding the former State Board of Insanity.

The Commission has general supervision of all public and private institutions for the insane, feeble-minded and epileptic persons, etc., and it has the right of investigation and recommendation as to any matter relating to the classes under care. Each State institution has, however, its Board of Trustees appointed by the Governor and Council.

The Commission inspects the institutions with reference to matters considered worthy of observation, and ascertains whether the laws relative to patients are properly observed.

It has power to investigate the question of sanity and condition of any person restrained of his liberty by reason of alleged insanity, and discharge any such person, who, in its opinion, is not insane, or who can be cared for after such discharge without danger to others and with benefit to himself. It acts often as a board of appeal in adjusting difficulties.

The powers of the Commission also control the interrelations of institutions and matters which are common to them all, such as transfers of patients, deportation of patients to other States and countries, claims to support as State charges in institutions, etc.

Expenditure of money under special appropriations for new buildings, unusual repairs, etc., is under the control of the Commission. It is required to prepare plans for buildings and to select land to be taken by the Commonwealth for the purpose of any new or extension of existing institutions. The Commission also analyzes all requests for maintenance, appropriations, etc.

The laws regarding the insane and other classes under care will be found in chapter 504 of the Acts of 1909, and amendments thereof.

#### SPECIAL NEEDS OF THE INSTITUTIONS.

The Commission believes that the special requests for appropriations should be limited to the essential requirements, and that the building program should provide accommodations only for the expected increase in population and for the overcrowding.

Inasmuch as it would be inadvisable to attempt any large building operations during the period of the war, there has been no further development at the Metropolitan Hospital site, it being thought best to provide additional accommodations at the Boston State Hospital in accordance with the plan of development of that institution. The need for accommodations is greatest in the districts served by the Boston State Hospital and the Northampton State Hospital. With their increasing admission rate it has been necessary to make room by transferring numbers of patients to outlying institutions.

The Commission believes it advisable to evolve a program to cover a period of at least ten years, caring for the needs of each hospital district, so that a definite policy can be presented to the Legislature each year for appropriations other than those necessary to care for the maintenance of institutions.

Work on the proposed school for the feeble-minded at Belchertown has been delayed inasmuch as a water supply cannot be obtained on the site, as was assured when the property was purchased, and to secure a supply elsewhere requires further legislation. To care for the property temporarily, clear some of the land and put in crops, a colony of boys was transferred from the Wrentham State School to one of the farm buildings at Belchertown, being operated by and under the supervision of the Wrentham State School. In the recommendations of the Commission a request is included to provide a water supply for the proposed school.

#### THE STANDARD OF CARE

in the State hospitals has been materially lowered by reason of the war, and great difficulty is being experienced in keeping a quota of officers and employees barely sufficient to administer our institutions with safety. Extra demands have been made on the members of the medical staffs whose training and experience especially fit them for the examinations of drafted men and of the National Guard.

For several years difficulty has been experienced in recruiting new employees. Much higher wages received in the community during the past year presented an even greater handicap to the institutions, and a revision of the wage schedule was imperative. It should be pointed out that the wage schedule of the nurse and attendant group has always been very low, the best proof being that these services no longer attract applicants. The result has been prejudicial to the best interests and welfare of the patients. Low wages attract only the restless and unsatisfactory; employees of a higher standard can easily find better-paid work. To obtain a class of employees who will continue in the service, a living wage and proper housing conditions must be provided.

While this might appear to require a material increase in the appropriation for personal service, it is believed that not so large a number of employees, if competent, would be required. The State would be the gainer, and the patients receive adequate and proper care. Under these conditions it would not be necessary to engage indifferent employees, unmindful of the best interests of the patients, and wasteful of institutional property. At the present time, owing to the inadequate working force, it is necessary for the institutions to send representatives continuously to employment agencies.

COMMISSION ON MENTAL DISEASES. [Jan.

#### STANDARDIZATION OF SALARIES.

During the year the Commission has co-operated with a subcommittee of the Governor's Council, and the Supervisor of Administration, in the work of standardization of salaries of officers and employees at the State institutions, to the end that there will be uniformity in classification and titles, definitions of duties of positions, and schedules of wages. Many conferences of the director of the Commission and superintendents of State institutions were held with the Supervisor of Administration and his assistants.

#### WAR WORK COMMITTEE.

Because of the demand for physicians experienced in the care of nervous and mental diseases, brought about by reason of the war, and the possibility of the State service being able to render assistance to the government, especially in matters of personnel, there was formed the Massachusetts Committee for War Work in Neurology and Psychiatry, with the following membership: Dr. George M. Kline, chairman; Dr. Walter E. Fernald; Dr. Elisha H. Cohoon; Dr. John A. Houston, treasurer; Dr. L. Vernon Briggs, secretary.

This committee co-operates with the war work committee of the National Committee for Mental Hygiene. There was available to this committee by gift a sum of \$5,000 for carrying on the work.

Dr. James V. May, who was superintendent of the Grafton State Hospital, was commissioned as major, and assigned to neuro-psychiatric work at Camp Devens, Ayer, Mass., conducting this work in connection with his duties as superintendent, until he was transferred to the superintendency of the Boston State Hospital.

The committee held numerous meetings, dealing especially with matters of personnel, the examination of the National Guard, and later, for the assignment of members to the advisory boards and for the examination of drafted men.

1918.]

#### TRAINING SCHOOLS.

On October, 1916, a committee, composed of Drs. Elisha H. Cohoon, John A. Houston, and George L. Wallace, was named by the Commission as a central board of examiners to arrange a uniform curriculum in the training schools for nurses. Their report was accepted, and appears on page 54.

The following superintendents, Drs. Elisha H. Cohoon, chairman, George L. Wallace and James V. May, were then appointed as members of a committee on training schools to standardize the work, conduct examinations, establish qualifications and deal with other matters relating to the training of nurses. A report of this committee was adopted and will be found on page 57.

#### NEW FORM FOR GENERAL STATISTICS.

The American Medico-Psychological Association appointed a committee to consider —

1. The desirability of uniform statistics relative to mental disease and the operation of institutions for the insane.

2. Classifications of mental diseases.

3. Forms to be used in reporting statistical data.

4. Means to be adopted to secure uniform statistical reports.

This committee reported and submitted a set of tables which they suggested be used in all institutions for the insane. The tables were adopted by the American Medico-Psychological Association, who recommended their use by State institutions, commissions, etc.

This Commission accepted the new classification, and the statistics in this report, and in the reports of the institutions under supervision, dealing with the insane, are in accordance with the request of the American Medico-Psychological Association.

#### PUBLICATION OF A BULLETIN.

The Commission has published a bulletin to be issued quarterly; this takes the place of the bulletin published monthly heretofore, and deals largely with subjects of scientific interest,

#### COMMISSION ON MENTAL DISEASES. [Jan.

14

papers being contributed by members of the medical staffs of the State institutions. A department is given over to administrative and other matters. The editors are Drs. Walter E. Fernald, George M. Kline and E. E. Southard.

#### FOOD AND FUEL.

Every effort has been made to assist in the conservation of the food supply. Farming operations have materially increased and greater provision has been made for the canning and drying of fruits and vegetables. The question of food conservation was made the subject of a semiannual conference of this Commission with the trustees and superintendents of institutions. By reason of the war unusual demands have been made on the time of the Commission and personnel of the institutions in attending meetings relative to the problem of food and fuel and the supplying of statistical data, etc.

#### THE FOLLOWING RATION ALLOWANCE

was adopted by the Commission as a basis for determining the food requirements in the various hospitals: ---

				Ounce per Day.	Ounce per Year.	Pounds per Year.	Commercial Units.
Flour,				<sup>•</sup> 9.50	3,467.50	216.710	1.105 barrels
Other farinaceous for	od,	•		3.20	1,168.00	73.000	-
Meats and fish, .				10.13	3,697.45	231.090	-
Butter,				1.37	500.05	31.250	-
Cheese,				.30	109.50	6.870	-
Coffee,				.44	160.60	10.030	_
Tea,				.12	43.80	2.730	-
Milk (pints), .				1.04	379.60	-	189.800 quarts
Eggs (number of), .				.50	182.50	-	15.208 dozen
Sugar,				1.90	693.50	43.343	-
Potatoes,				9.50	3,467.50	216.710	3.611 bushels
				38.00	-		-

Fruit, 1 cent per day; \$3.65 per year.

#### 1918.] PUBLIC DOCUMENT — No. 117.

#### THE RECOMMENDATIONS FOR LEGISLATION

named below were submitted to the General Court of 1918: — To provide for the transfer of women inebriates to Norfolk

State Hospital.

To place the Hospital Cottages for Children under the supervision of the Massachusetts Commission on Mental Diseases.

Relative to the construction and improvement of buildings at State institutions.

Relative to a water supply for the proposed school for the feeble-minded at Belchertown.

To provide for the temporary care of persons suffering from mental diseases who are in the military or naval service of the United States.

To provide further supervision, care, etc., of the neglected, dangerous, or uncontrolled feeble-minded in the community.

To ascertain the mental conditions of persons coming before the courts of the Commonwealth. COMMISSION ON MENTAL DISEASES. [Jan.

#### **REVIEW OF THE YEAR.**

ALL CLASSES UNDER CARE.

The number and location of these classes, Oct. 1, 1917, were: -

Location.	Insane.	Feeble-minded.	Epileptic (Sane).	Voluntary (Sane).	Inebriates.	Totals.	Other Classes.
Worcester State Hospital,	1,584	-	-	1	-	1,585	-

<sup>1</sup> Taken from reports of overseers of the poor, March, 1917.

<sup>2</sup> Includes temporary care cases.

<sup>3</sup> Includes 278 patients placed in family care by trustees.

1918.]

#### THE WHOLE NUMBER OF THESE CLASSES

under care Oct. 1, 1917, was 19,100, being 1 such person to every 201 of the estimated population of the State. Of this number, 15,335, or 80 per cent., were insane; 2,945, or 15 per cent., feeble-minded; and 737, or 4 per cent., epileptic (sane). Their increase for the year was 382.

The whole number of such persons under public care was 18,645; under private care, 455.

The increase of such persons under public care for the year was 368; their average annual increase for the last five years, 504.

#### THE INSANE

under care Oct. 1, 1917, numbered 15,335, being 1 insane person to every 250 of the estimated population of the State. In addition, there were 1,284 persons who were temporarily absent from institutions, and a considerable number of others in the community who had been previously discharged or had never appeared in institutions for the insane.

The insane appear under public care in public institutions and boarded out in family care, at public expense, and under private care in private institutions. Their number and increase in these locations for the year, the last five years, the last ten years and the last twenty-five years are shown as follows: —

	Num	In		se ov: Js Ye		RE-	Increase, ears.	Increase, ears.	Increase,		
	Males.	Females.	Totals.	1917.	1917. 1916. 1915.		1914.	1913.	Average Ir Five Yes	Average Ir Ten Yea	Average Ir Twenty- Years.
Public institutions, 1.	7,402	7,538	14,940	311	319	831	396	379	447.2	473.8	402.72

Total, public and private.	7,523	7,812	15,335	287	302	624	356	401	394.0	456.7	401.92

<sup>1</sup> Includes 278 patients in family care under trustees.

<sup>2</sup> Decrease.

#### THE INCREASE OF THE INSANE

under care for the year was 287, compared with 302 the previous year; 394, the average annual increase for the last five years; 456, the last ten years; and 401, the last twenty-five years.

The number of non-resident insane was 80, compared with the same number the previous year, and 75, the average number the last five years. Of these, 75 were patients in private institutions, and 5, private patients in State hospitals.

It is the policy of the State not to receive into its institutions non-residents, even as private patients, unless their friends are resident in Massachusetts and have just claims for such service.

THE INCREASE OF THE INSANE UNDER PUBLIC CARE was 294, compared with 297 the previous years; 393, the average annual increase for the last five years; 451, the last ten years; and 397, the last twenty-five years.

THE DECREASE OF THE INSANE UNDER PRIVATE CARE was 7, compared with an increase of 5 the previous year; .6 the average annual increase for the last five years; 5, the last ten years; and 4, the last twenty-five years.

In addition to the insane there were in private institutions 150 other patients. Of these, 13 were sane voluntary mental patients, 43 nonmental patients, 35 inebriates, and 59 feebleminded.

The Decrease of the Insane in Family Care under the Commission

was 17. The number in family care under institutions on Oct. 1, 1917, was 278, a decrease of 56.

#### ALL ADMISSIONS OF MENTAL PATIENTS

from the community to public institutions and McLean Hospital were 5,786. They comprise commitments as insane, temporary-care admissions, voluntary admissions of the insane, and voluntary admissions of mental patients who were classed as sane.

Admissions as insane to public institutions and McLean Hospital, inclusive of voluntary insane and temporary-care cases, numbered 5,693.

Voluntary admissions of the insane, which are included in the above figure, were 627, compared with 474 the previous year. Public institutions received 558 such patients and McLean Hospital 69.

Voluntary admissions of mental patients who were classed as sane were 93, compared with 116 the previous year. Public institutions received 90 such patients, and McLean Hospital, 3.

#### All Voluntary Admissions

to public institutions and McLean Hospital were 720, compared with 590 the previous year, and 706, the average the last five years. Public institutions received 648 such patients, compared with 512 the previous year, and 639, the average the last five years. McLean Hospital received 72 such patients, compared with 78 the previous year, and 67, the average the last five years.

#### FIRST CASES OF INSANITY

appeared in public institutions and McLean Hospital to the number of 4,159. Of all the admissions of the insane to these institutions (inclusive of insane voluntary and temporary-care patients), 73.05 per cent. appeared for the first time in any institution for the insane. One insane person came under care for the first time from every 922 of the estimated population of the State.

#### THE NATIVITY

of such first cases of insanity does not differ materially from the percentages of the previous year. Exclusive of 42 whose birthplaces were unknown, 2,332, or 56.6 per cent., were born in the United States, and 1,785, or 43.4 per cent., in foreign countries.

#### THE PARENTAGE

also corresponds substantially with the percentages of previous years. Exclusive of 344 whose birthplaces were unknown, 1,297, or 31.9 per cent., of the parents of male patients were born in COMMISSION ON MENTAL DISEASES. [Jan.

the United States, and 2,763, or 68.1 per cent., in foreign countries.

Exclusive of 352 whose birthplaces were unknown, 1,211, or 34 per cent., of the parents of female patients were born in the United States, and 2,351, or 66 per cent., in foreign countries.

#### CITIZENSHIP.

Of the 4,159 first admissions as insane, 2,356, or 56.65 per cent., were citizens by birth, and 306, or 7.36 per cent., by naturalization. There were 592 aliens, or 14.23 per cent., and 905, or 21.76 per cent., where the citizenship was unascertained.

PSYCHOSES OF FIRST ADMISSIONS

were as follows: --

Traumatic,					12  or	.29 per cent.
Senile,					314 or	7.55 per cent.
With cerebral arteriosclerosis, .					300 or	7.21 per cent.
General paralysis,					328  or	7.89 per cent.
With cerebral syphilis,					58  or	1,39 per cent.
With Huntington's chorea, .					5  or	.12 per cent.
With brain tumor,				7	14  or	.34 per cent.
With other brain or nervous disea	ses,				34  or	.82 per cent.
Alcoholic,					511 or 1	2.29 per cent.
Due to drugs and other exogenous	s tox	ins,			10 or	.24 per cent.
With pellagra,					5  or	.12 per cent.
Psychoses with other somatic dise	ases,	, .			85 or	2.04 per cent.
Manic-depressive,	•	•		•	347  or	8.34 per cent.
Involution melancholia,		•			94 or	2.26 per cent.
Dementia præcox,					1,021 or 2	24.55 per cent.
Paranoia and paranoic conditions,						1.37 per cent.
Psychoneuroses,			•		89 or	2.14 per cent.
With mental deficiency,					95 or 1	2.29 per cent.
With constitutional psychopathic	infe	riori	ty,		11 or	.26 per cent.
Epileptic,					118 or	2.84 per cent.
Undiagnosed,					183 or	4.40 per cent.
Not insane,					468 or 1	1.25 per cent.

The following 6 forms, namely, senile, 7.55 per cent.; with cerebral arteriosclerosis, 7.21 per cent.; general paralysis, 7.89 per cent.; alcoholic, 12.29 per cent.; manic-depressive, 8.34 per cent.; dementia præcox, 24.55 per cent., furnished 67.83 per cent. of first admissions.

1918.]

#### RACE.

The races named below furnished the greatest number of first admissions.

1,208, or 29.50 per cent., English.
1,076, or 25.87 per cent., Irish.
282, or 6.78 per cent., Slavonic.
222, or 5.34 per cent., French.
87, or 2.09 per cent., German.
166, or 3.99 per cent., Italian.
101, or 2.43 per cent., Scotch.
99, or 2.38 per cent., Scandinavians.
395, or 9.50 per cent., mixed.

#### Ages.

The following tabulation shows the numbers and percentages of ages on first admissions: —

Under 20 years,							345, or 8.3 per cent.
From 20 to 25,							429, or 10.3 per cent.
From 25 to 30,							474, or 11.4 per cent.
From 30 to 35,						•	445, or 10.7 per cent.
From 35 to 40,							436, or 10.5 per cent.
From 40 to 45,							400, or 9.6 per cent.
From 45 to 50,							366, or 8.8 per cent.
From 50 to 55,							302, or 7.3 per cent.
From 55 to 60,							231, or 5.6 per cent.
From 60 to 65,							203, or 4.8 per cent.
From 65 to 70,							161, or 3.9 per cent.
Over 70, .		•	•	•	•	•	367, or 8.8 per cent.

#### DEGREE OF EDUCATION.

Of the 4,159 first admissions —

392, or 9.43 per cent., were found to be illiterate.
818, or 19.67 per cent., could read and write.
2,016, or 48.47 per cent., attended common school.
415, or 9.98 per cent., received a high school education.
101, or 2.43 per cent., attended college.
417, or 10.02 per cent., were unascertained.

#### ENVIRONMENT.

The urban districts furnished 3,521, or 84.66 per cent., of the first admissions; rural localities, 631, or 15.17 per cent.; and there were 7, or .17 per cent., whose place of residence was unknown.

#### COMMISSION ON MENTAL DISEASES. [Jan.

#### THE ECONOMIC CONDITIONS

of these admissions are shown as follows: --

Dependent, 694, or 16.69 per cent. Marginal, 2,455, or 59.03 per cent. Comfortable, 913, or 21.95 per cent. Unascertained, 97, or 2.33 per cent.

#### MARITAL CONDITION.

It appears that 1,837, or 44.16 per cent., were single at the time of admission; 1,681, or 40.42 per cent., married; 539, or 12.96 per cent., widowed; 17, or .41 per cent., separated; 61, or 1.47 per cent., divorced; and there were 24, or .58 per cent., whose marital condition was unknown.

#### ALL DISCHARGES.

#### The Results of Mental Disease

at public institutions and McLean Hospital are shown in the conditions of patients on discharge.

577, or 15.65 per cent., recovered.
1,342, or 36.41 per cent., were improved.
1,138, or 30.87 per cent., were not improved.
629, or 17.07 per cent., were not insane at the time of discharge.

#### THE RECOVERY RATE

for the whole State numbered 602, or 10.19 per cent. of all admissions of insane.

The percentages of recoveries under public care and McLean Hospital (inclusive of insane voluntary and temporary care) were: —

Of admissions, 10.14 per cent. Of daily average number, 3.56 per cent.

#### DEATHS.

The death rate of the insane for the whole State during the year was 10.53 per cent. of the daily average number on books. The percentages of deaths in public institutions and McLean Hospital were: —

Of daily average number, 10.55 per cent. Of discharges (inclusive of deaths), 31.65 per cent.

Cerebral arteriosclerosis was present in 14.31 per cent. of all deaths at public institutions and McLean Hospital; general paralysis in 14.02 per cent.; manic-depressive in 5.86 per cent.; dementia præcox in 21.40 per cent.; epilepsy in 6.39 per cent.; alcoholic in 4.87 per cent.; senile in 18.01 per cent.

These seven forms were present in 84.86 per cent. of the deaths.

Further statistical details will be found in the Appendix, beginning with Table No. 11, on which the foregoing statements and conclusions are based.

#### THE FEEBLE-MINDED.

THE WHOLE NUMBER OF THE FEEBLE-MINDED under care Oct. 1, 1917, was 2,945, being 1 feeble-minded person to every 1,302 of the estimated population of the State.

The feeble-minded appear under public care in public institutions and almshouses, and under private care in private institutions. Their number and increase in these locations for the year and the last five years are shown as follows: —

	Numb	er Oct.	1, 1917.	IN		se ov Js Ye	ER PI	RE-	Increase, ears.	
	Males.	Females.	Total.	1917.	1916.	1915.	1914.	1913.	Average Incre Five Years.	
School for the Feeble-minded at Waltham.	949	627	1,576	14 1	44	69	68	56	27.0	
Wrentham School,	470	627	1,097	105	318	45	206	19	138.6	
Hospital Cottages for Children, .	-	-	-	-	-	-	22 <sup>1</sup>	81	6.01	
Almshouses,	107	106	213	301	9	64	82 1	13 1	10.41	
State Infirmary,	-	-		-	-	-	1441	23	24.21	
Total, public,	1,526	1,360	2,886	61	283	178	26	77	125.0	
Elm Hill,	33	11	44	41	1'	51	1 1	3	1.61	
Smaller private institutions,	8	7	15	3	11	-	-	31	.21	
Total, public and private, .	1,567	1,378	2,945	60	281	173	25	77	123.2	

#### THE INCREASE OF THE FEEBLE-MINDED

under care for the year was 60, compared with 281 the previous year, and 123, the average the last five years.

The number of nonresident feeble-minded was 36, compared with 50 the previous year. Of these, 33 were patients in private institutions, and 3, private patients in State institutions.

It is the policy of the State to receive feeble-minded persons from other States only when there is no school for the feebleminded in such States, and then only in urgent cases. The nonresident patients are paid for at a rate which fully compensates the State for the cost of their maintenance.

#### THE EPILEPTIC.

#### THE WHOLE NUMBER OF THE EPILEPTIC

under care Oct. 1, 1917, was 1,512, being 1 epileptic to every 2,537 of the estimated population of the State.

The epileptic appear under public care in the Monson State Hospital, the State hospitals and other public institutions, and under private care in private institutions. Details will be found under the Monson State Hospital.

Their number and increase in these locations for the year and for the last five years are shown as follows: ---

	NUMB	er Oct.	1, 1917.	INC		e ovi js Ye	ER PR	£-	Increase, ears.	
	Males.	Females.	Totals.	1917.	1916.	1915.	1914.	1913.	Average Incre Five Years.	
Monson Hospital,	524	518	1,042	49	22 <sup>1</sup>	52	41	35	31.0	
Public institutions for insane, .	235	215	450	31 1	57	22	5	18 <sup>1</sup>	7.0	
Schools for the feeble-minded, .	8	5	13	-	-	21 1	71 1	9	16.61

Total, public and private, .	772	740	1,512	14	36	50	24 1	27	20.6	

<sup>1</sup> Decrease.

In addition, the overseers of the poor report (March 31, 1917) 45 epileptics in city and town almshouses and private families.

#### 1918.]

#### THE INCREASE OF THE EPILEPTIC

under care for the year was 14, compared with an increase of 36 the previous year, and 20, the average increase the last five years.

#### REPORT OF THE PATHOLOGIST.

#### To the Commission on Mental Diseases.

Following is the pathologist's ninth report and the eighth to cover a full year of work.

The duties of the pathologist to the Commission, originally appointed May 1, 1909, have been designated as follows: (1) supervision of the clinical, pathological and research work in the various institutions under the Commission's supervision and control; (2) visits to the institutions from time to time; and (3) reports to the Commission comprising conditions, observations and such recommendations as result therefrom.

These duties have been modified, and the entire scope of the pathological service has been broadened, since the establishment of the Psychopathic Hospital and the appointment of the Commission's pathologist to the directorate of the hospital. The hospital performs, besides its local metropolitan district functions, certain Statewide clinical and research functions, including preparatory and extension training courses for State hospital physicians. The present report deals with these latter functions under separate headings.

#### I. GENERAL.

Last year I was able to report that the Commission's pathological service was growing fast, pointing out how the service had gathered momentum in July, 1914, with the appointment of an assistant pathologist, clerk and technician; how in 1915 a special officer had been appointed to study the therapy of neurosyphilis systematically; and how in 1916 the pathological work of the western district had been developed, together with the opening of wards for the special treatment of syphilis of the nervous system in the Grafton State Hospital.

This year I am compelled to report what we all hope is a temporary block in our advance, owing to the declaration of war and the subsequent withdrawal of Dr. Harry C. Solomon, special investigator in syphilis of the nervous system, and of Dr. Douglas A. Thom, assistant pathologist, both of whom have gone into the

Medical Officers' Reserve Corps, and are working, the former in the Subsection of Head Surgery in the Division of Surgery, and the latter in the Division of Neurology and Psychiatry of the Surgeon-General's Office. Neither position had been filled at the time of writing (June, 1918), although the filling of one of the two vacancies by a physician over draft age is under contemplation.

Following is the laboratory staff of the Commission on Mental Diseases: ---

- E. E. Southard, M.D., pathologist, appointed May 1, 1909; since May 1, 1912, director of the Psychopathic Department of the Boston State Hospital.
- Myrtelle M. Canavan, M.D., assistant pathologist, appointed July 1, 1914; since July 1, 1916, in special charge of the eastern district work.
- Harry C. Solomon, M.D., special investigator in syphilis of the nervous system, appointed Nov. 15, 1915.
- Douglas A. Thom, M.D., assistant pathologist, appointed July 1, 1916; acting as special investigator in syphilis of the nervous system, and in charge of the western district pathological work. On leave of absence to the Medical Officers' Reserve Corps, United States Army.

Lillian D. Rider, secretary, appointed Nov. 16, 1914.

Ellen R. Scott, technician, appointed Dec. 15, 1914.

LABORATORY STAFFS OF THE STATE INSTITUTIONS.

#### Worcester State Hospital.

- Harold I. Gosline, M.D., pathologist, appointed July, 1915. Resigned Dec. 31, 1916.
- H. E. Thompson, M.D., pathologist, appointed March 1, 1917. Resigned September, 1917.

Julius H. Stean, technician, appointed Oct. 9, 1915.

- The junior physician on each clinical service aids in post-mortem examinations from his service.
- The Worcester laboratory was founded in 1895, and its first pathologist was Dr. Adolf Meyer. The laboratory building was opened in 1905.

#### Taunton State Hospital.

- Abraham Myerson, M.D., clinical director and pathologist, appointed Sept. 13, 1913. Resigned September, 1917.
- Linneon R. Smith, stenographer, appointed July, 1914. Resigned February, 1917.
- Marion Sweet, technician, appointed Nov. 13, 1916. Resigned November, 1917.

Katherine McConnville, technician, appointed May 8, 1917.

The Taunton laboratory was founded in 1896, and its first pathologist was Dr. Frederick S. Ward.

1918.]

#### Danvers State Hospital.

Lawson G. Lowrey, M.D., pathologist, appointed June, 1914. Resigned February, 1917.

Daniel A. Gould, technician, appointed Feb. 1, 1916.

The Danvers laboratory was founded in 1895, and its first pathologist was the late Dr. William Leonard Worcester.

#### Westborough State Hospital.

Solomon C. Fuller, M.D., pathologist, appointed 1897.

Miss Emily Robinson, technician, appointed March 17, 1913.

The Westborough laboratory work may be said to have begun in 1897, with the appointment of Dr. E. Lindon Mellus. The laboratory building was built in 1905.

#### Boston State Hospital.

Mary E. Morse, M.D., pathologist, appointed January, 1915. On leave of absence August, 1917.

Adele R. Emerson, M.D., technician, appointed Dec. 1, 1916. Resigned May, 1917.

The pathological work of the Psychopathic Department of the Boston State Hospital is executed by Myrtelle M. Canavan, M.D., assistant pathologist to the Commission on Mental Diseases. An interne assists.

#### Monson State Hospital.

Herman Caro, M.D., pathologist, appointed September, 1916. Resigned August, 1917. Medical Officers' Reserve Corps.

Edna C. Hogaboom, technician, appointed April, 1914.

#### Mental Wards, State Infirmary.

Thomas J. Heavey, technician, appointed May, 1915.

The first laboratory at Tewksbury was established in 1895, under the direction of Dr. John M. Gile.

#### Grafton State Hospital.

D. A. Thom, M.D., acting pathologist, appointed July 1, 1916. On leave of absence to the Medical Officers' Reserve Corps, August, 1917. Grace Durling, technician, appointed Aug. 1, 1916.

#### Foxborough State Hospital.

Willard C. Rappleye, pathologist, appointed June, 1917. George L. Bunnell, laboratory assistant, appointed Oct. 1, 1916. Julia Morrison, technician, appointed June, 1917.

#### Massachusetts School for Feeble-minded.

Laboratory work of a special research nature is being carried on by Drs. E. E. Southard, Annie E. Taft and Myrtelle M. Canavan.

#### McLean Hospital.

E. Stanley Abbott, M.D., assistant physician and pathologist.

F. Lyman Wells, Ph.D., assistant in psychological pathology.

Of the laboratory staffs above listed —

Dr. H. I. Gosline is now a captain in the Medical Reserve Corps.

Dr. H. E. Thompson is in public health work in the State of Maine.

Dr. A. Myerson is chief medical officer, Out-patient Department, Psychopathic Hospital.

Dr. L. G. Lowrey is chief medical officer, Psychopathic Hospital.

Mr. Daniel A. Gould is in the Sanitary Corps.

Dr. H. Caro is a lieutenant in the Reserve Corps.

Dr. D. A. Thom is a captain in the Reserve Corps, serving in England at the time of writing.

Dr. E. Stanley Abbott is a major in the Reserve Corps.

Dr. F. Lyman Wells is in the government service as psychologist.

It will be noted from the table below that the number of visits to institutions by the pathological officers has been diminished, but the number of autopsies has been increased from 184 to 265.

The following table shows the routine work of the investigative staff of the Commission: ---

visits to institut.	ions											
By patholog	ist,										•	16

Publications.												26

Visits to institutions: ----

An appropriation of \$5,000 for 1917 was granted by the Legislature, the same as for 1916. This appropriation is for the purpose of investigation as to the nature, causes, results and treatment of mental disease and defect, and for the publication of the results of said investigation. A considerable portion of the sum is devoted to the purchase of salvarsan used in the systematic investigation and treatment of syphilitic disease of the nervous system.

Last year a bill was introduced into the Legislature seeking permission for a Statewide extension of the Psychopathic Hospital service. The bill was duly passed, and, as soon as its provisions can be properly utilized, tremendous advances in mental hygiene will undoubtedly be registered. The text of the bill is as follows: —

SECTION 1. The commission on mental diseases is hereby authorized to develop, extend and complete a statewide system of psychopathic hospital service by establishing new hospital and out-patient units in suitable districts in connection with existing or future state hospitals under the supervision of said commission. The administration of the separate new district units and the appropriations granted therefor shall be in accordance with laws governing the state hospitals to which the land, buildings and furnishing of said units shall appertain. The direction of the scientific work in the proposed new units, together with that of the psychopathic department of the Boston state hospital already established under the provisions of chapter four hundred and seventy of the acts of the year nineteen hundred and nine, shall be vested in the commission on mental diseases by means of its duly appointed agents, and said commission shall provide, out of the appropriation for the department, for the salaries and wages of directing and investigative officers and employees and for the expenses of investigation of the nature, causes, treatment and results of mental disease and defect.

SECTION 2. This act shall take effect upon its passage.

I have had occasion in recent years to call attention to the improvement in efficiency caused by the gradual drawing together of clinical and laboratory interests in the State institutions. It is now certainly not too much to say that, especially by means of the community of interests in syphilis therapy, there has been a large increase of contact between the clinical and laboratory men. A number of laboratory men have been led to go into clinical work to the great advantage of both sides of medicine. I need only mention Dr. Abraham Myerson and Dr. Douglas A. Thom, who may be regarded as originally clinicians who greatly enriched their experiences in laboratory work,

and Drs. Harry C. Solomon and Lawson G. Lowrey, whose course has been in the opposite direction, namely, from laboratory to clinical work.

The aim of the pathologist to your Commission has constantly been to produce, so far as the opportunities of Massachusetts permit, well-rounded men capable of attacking problems from both sides. Had we not been faced by the war problem, it had been the writer's hope that more and more of the clinicians of the State service could have been induced to enter paths of research, particularly those researches that grow directly out of routine.

As to the Statewide function of preparatory and extension training courses for State hospital physicians, the following list of physicians who have embraced the opportunities afforded by psychopathic hospital work will give evidence: —

- Elizabeth I. Adamson,<sup>1</sup> M.D., Ohio State Hospital, July 25 to Aug. 31, 1917.
- John H. Arnett, M.D., Philadelphia, Pa., Sept. 15 to Dec. 9, 1916.
- Louis G. Beall, M.D., Greensboro, N. C., Jan. 17, 1917, to Feb. 14, 1917.
- David T. Brewster,<sup>2</sup> M.D., Danvers State Hospital, April 16 to May 16, 1917.
- Edgar O. Crossman, M.D., Burlington, Vt., Oct. 2 to Dec. 1, 1916.
- Charles M. Flagg,<sup>2</sup> M.D., Danvers State Hospital, May 21 to June 21, 1917.
- Alma E. Fowler,<sup>2</sup> M.D., Taunton State Hospital, May 25 to Sept. 4, 1917.
- Laura B. Keisker, M.D., Washington, D. C., Oct. 10 to Oct. 20, 1917.
- Minta P. Kemp,<sup>1</sup> M.D., Newberry State Hospital, Mich., May 26 to Aug. 25, 1917.
- Rives A. Manker, M.D., Memphis, Tenn., Oct. 20 to Dec. 8, 1917.
- Thomas H. Raines,<sup>1</sup> M.D., Howard, R. I., Jan. 2 to April 16, 1917.
- Israel E. Rudman, M.D., Medical Officers' Reserve Corps, Nov. 1, 1917, to Jan. 24, 1918.
- Francis M. Shockley, M.D., Government Hospital, Washington, D. C., Nov. 25, 1916, to Jan. 10, 1917. (Captain, Medical Officers' Reserve Corps.)
- Eleanor M. Slater,<sup>2</sup> M.D., Northampton State Hospital, Sept. 1, 1916, to March 30, 1917.
- Herbert E. Thompson,<sup>2</sup> M.D., Worcester State Hospital, March 15 to April 15, 1917.
- Nelson G. Trueman,<sup>2</sup> M.D., Danvers State Hospital, April 1 to May 31, 1917.
- Esther S. B. Woodward,<sup>1</sup> M.D., Psychiatrist, Westchester County Clinic, New York, Sept. 20, 1916, to March 10, 1917.
- Frank V. Willhite,<sup>1</sup> M.D., South Dakota State Hospital, Nov. 4, 1916, to Jan. 8, 1917.

<sup>1</sup> State service outside of Massachusetts.

<sup>&</sup>lt;sup>2</sup> Massachusetts State hospital service.

II. ROUTINE OF THE PATHOLOGICAL SERVICE: AUTOPSIES.

Since the establishment of the pathological service, in 1914, during a period of forty-one months 695 autopsies have been performed, in the vast majority of cases by the service officers, in some instances supplemented by hospital pathologists acting as prosectors. It will be noted that these autopsies are almost all autopsies which would not have been performed except with the facilities of the Commission's pathological service, for the majority of these autopsies, as the table below shows, have been performed in institutions that have no pathological services of their own. Where an institution has too few deaths, or for other reasons cannot maintain a pathological laboratory, the Commission has stepped in to round out the pathological work of the State, and to give uniform advantages of pathological examination to all institutions.

During the year ending Nov. 30, 1917, there were 265 autopsies, being 81 more than the number performed in the previous year. The increase has been permitted in part by the establishment of the western district.

The following table shows the number of autopsies performed in the different institutions (by the pathological service of the Commission, and exclusive of autopsies performed by the staffs of institutions): —

Grafton State Hospital, .									110
Medfield State Hospital, .		•							41
Worcester State Hospital,		•		•				•	26

COMMISSION ON MENTAL DISEASES. [Jan.

The routine cf the pathological service naturally deals primarily with cases of sudden death, not only those which are medicolegal in the narrow sense of a suspicion of foul play, but also other sudden deaths where there might be a question of negligence or accident. The following table gives data concerning sudden deaths reported to the Commission.

In addition to the 265 autopsies there were viewings of bodies in institutions not followed by autopsies by the pathological service, though occasionally followed by autopsies by medical examiners.

Quilles leads and det	<b>a</b>	•	•								00
Sudden deaths reported to	0.0	mmis	ssion	,	•	•	•	•	•	•	83

Deaths in general paresis	or ta	abes,				•					6
Arteriosclerosis and corona											3
Choked by food, .											<b>2</b>
Homicides,											1
Burns,											1
•											

The problem of sudden deaths in institutions is always difficult. Of course, it is generally understood that many cases of sudden death are by no means worthy of medicolegal suspicion. We are now enabled to present an analysis of 178 cases of sudden death of all sorts, both medicolegal and otherwise, and present in the accompanying table a list in order of frequency of the causes of death in these cases.

1918.]

Analysis, Autopsied Cases (Sudden Deaths).

The mental diagnoses in suicides in the hospitals deserve mention, since dementia præcox furnishes 8 cases out of 36 in four years. It has been thought by some workers that manic depressives were the only patients specially apt to suicide, but in England Mott had warned against relaxing vigilance over the dementia præcox cases.

Diagnoses in suicides in State hospitals, 36.

<sup>1</sup> Death before a definite mental diagnosis determined.

The pathological building at Bridgewater has now been fitted with heating apparatus from the central heating plant.

Awaiting arrangements for pathological work in the new building, the Foxborough State Hospital has provided excellent and practical facilities in the basement of an older building.

Improvements in the autopsy facilities at the School for the Feeble-minded, Waltham, have been completed. Space has been arranged for the very important matter of the X-ray, of the greatest interest in connection with glandular disorders of the feeble-minded.

Plans for utilizing the old building on the Worcester grounds of the Grafton State Hospital for the purpose of a laboratory are under way.

I have not hitherto published a statement of the percentage of autopsies obtained at the different institutions in proportion to the number of deaths. Following is such a table: —

						Total Number of Deaths for Year.	• Total Number of Autopsies.	Per Cent.

<sup>1</sup> Done by Commission.

The proportions are so different in the different institutions that I cannot help thinking that the authorities might well consult with one another from time to time for the purpose of bringing up their standards. Binghamton Hospital in New York has raised its standard of ratio of autopsies to deaths to the neighborhood of 75 to 80 per cent. during the last few years. As the accompanying table shows, only the Foxborough State Hospital has attained anywhere near this level. The pathologist to your Commission is especially concerned at the low rate of autopsies obtained at the Psychopathic Hospital which is scientifically under his immediate charge. Unless a better record can be made for this hospital it might seem advisable to take measures to forbid the entrance to the hospital of patients upon whom autopsies were not promised in case of death, the point being that the relatively expensive plans of research attack upon these cases at the Psychopathic Hospital come to little purpose in fatal cases unless an autopsy is granted. In particular, this plan might be of benefit in cases in which systematic treatment of syphilis is being administered.

## III. ROUTINE OF THE PATHOLOGICAL SERVICE: CASUALTIES.

We have now had a fourth year's experience in the special analysis of the casualties of the institutions, and are planning to present to the annual meeting of the American Medico-Psychological Association an "efficiency" study of these casualties. The casualty records of each institution are analyzed by means of an analytical chart of casualties in institutions (being Chart G of the Commission's pathological charts), under three headings, namely, "statistical," "nature and severity" and "manner of injury."

COMMISSION ON MENTAL DISEASES. [Jan.

Two hundred and thirty-five accidents were reported to the Commission during 1917 as against 304 in 1916, 313 in 1915 and 346 in 1914. On account of the increase in the total number of patients under care during the period there is again to be reported an actual decrease in reported accidents, which is even in excess of the obvious decrease shown by the figures. This would be a matter for congratulation if there was still not so much variety in the standards of reporting that it is hard to interpret the figures.

As in previous years, the pathological department has felt that the total number of fractures and dislocations is perhaps a better index of medical care in the institutions, since there can be no deviation in the standards of reporting these severe injuries. This year there were 151 cases of fracture or dislocation as against 159 last year. Only the figures for future years will show whether this decrease indicates an actual betterment of standards.

As dislocations are often more an index of ungentle nursing than are fractures, it is of interest to note that this year there were but 19 instances of dislocation as against 29 last year. It is of note that the chief improvement in the matter of dislocations has been registered by Medfield State Hospital, in which hospital for 1916 there were 15 dislocations, whereas in 1917 there were but 2.

It is a question whether the analysis of casualties in the institutions may not afford a better index of the general care than any other single measure of analysis that could be adopted. If definite standards including an irreducible minimum could be laid down for the institutions of this Commonwealth and other States, the chances are that a great improvement in mental hygiene might be registered. Of course it must be conceded that, where certain measures of restraint are greatly in vogue and patients remain bedfast, who might in other institutions be up and about, a low index will be registered for the institution which holds its patients bedfast. This low index will not always mean a general high standard of hygiene for the institution in question.

## IV. INVESTIGATIONS.

The investigative function of the pathological service may be said to execute the provisions of section 6, chapter 504, Acts of 1909, which section reads in part as follows: — The board shall encourage scientific investigation by the medical staffs of the various institutions under its supervision, shall publish from time to time bulletins and reports of the scientific and clinical work done therein, . . .

40

In compliance with these provisions the Commission has established a bulletin under the directorship of Drs. George M. Kline, Walter E. Fernald and E. E. Southard. This bulletin is designed to include such publications by the officers of the different institutions as may be deemed worthy of reprinting. The editorial board has for the most part omitted only papers of a fragmentary and propagandist nature, or papers which are bound to secure, owing to their mode of publication elsewhere, a sufficiently wide circulation.

The quarterly bulletin is designed to take the place of the collected publications of the Commission and of the institutions which have been issued in previous years.

The estimates for scientific investigation, amounting in years following 1911 to \$2,500 annually, were increased in 1915 to \$5,000 on account of the investigation and treatment of syphilis of the nervous system then deemed desirable. No comprehensive account of the investigations undertaken under the appropriations, which have been duly granted, will be given in this report. The general nature of these investigations can be seen from the list of publications given below in Section VII. of this report.

Notes concerning hygienic work in the institutions will be found in the excerpts from reports of institutions given below. As for our most important work, namely, the increase of knowledge in psychiatry through the encouragement of scientific investigation, some progress has been made. No apology need be made for putting syphilis in the forefront of the routine problems of psychiatry in the institutions. Monograph Number Two of the Psychopathic Hospital, a volume of 496 pages, containing 123 original cases of syphilis of the nervous system and 14 cases derived from the war literature of the belligerents, has been published, and will be mentioned briefly in Section V. It will be remembered that Monograph Number One of the Psychopathic Hospital series was the book on the point scale by Yerkes, Bridges and Hardwick. Dr. (now Major) Yerkes developed, while psychologist at the Psychopathic Hospital, not only the point scale but also his so-called multiple choice methods of estimating mental capacity. The first two monographs have thus

dealt with two of the most important branches of psychiatric work.

For a number of years the Commission has been accumulating data for a study of the brains of the insane, epileptic and feebleminded, together with some data of value for criminology and in the field of alcoholism. From time to time, also, certain socalled "normal" brains have accrued to the Commission from institutions which were not under its control, but which have looked to the staffs and laboratory equipment of the Commission for help in some of their problems.

The brain photograph collection now approaches 1,000 cases. Each case represents a set of photographs, with and without the pia mater removed, of the superior, inferior, two lateral and two mesial aspects. The views of the brain with the pia mater in place are as a rule kept for reference, in case the histological examination should prove abnormality of an inflammatory nature to exist in one or other area. The photographs of the peeled brains are mounted upon large cards permitting ready reference and study of abnormalities. Upon identical large cards are also mounted photographs of frontal sections which are habitually made (unless indications point in another direction) in all cases. The estimate of the complexity of the brain can thus be made on a basis of the external convolutional richness, the proportion of white matter exhibited in the frontal sections, and upon the relative size of the corpus callosum as shown in the mesial sections.

This collection of brain photographs is unique in the laboratories of the world, and from some points of view cannot be excelled as a research collection.

The first extensive publication from these data was made in 1914 in a paper by the undersigned on "The Brain Findings in Dementia Præcox" (19 plates). On account of the lively and growing interest in the topic of feeble-mindedness, and on account of the valued co-operation of Dr. Walter E. Fernald of the Massachusetts School for the Feeble-minded, an extensive analysis was made of the brains of the feeble-minded. The first monograph on this topic, entitled "Waverley Researches in the Pathology of the Feeble-minded (Research Series Cases I. to X.)," has been published with 84 plates in the "Memoirs of the American Academy of Arts and Sciences," Vol. XIV., No. II, May, 1918. This expensive publication was chiefly financed by the Massachusetts School for the Feeble-minded; partly (as to the

plates) by Dr. W. N. Bullard, formerly chairman of the Monson State Hospital Trustees; and partly by the Harvard Medical School (through the technical work of the department of neuropathology), but the work could not have been done without the systematic efforts of the Commission on Mental Diseases.

I want to call the attention of those who bewail the low standard of American work in neurological science to the fact that, when money is forthcoming and stable conditions hold in the laboratories, valuable researches of a novel nature will be the outcome. Neither money nor stable conditions will necessarily provide workers with original ideas. There is a certain distinction between new work and original work. *New* work of definite value can be bought and paid for under stable conditions. *Original* work in this complex field can also hardly be forthcoming without money and stability.

I wish here publicly to commend the scientific spirit of the Commission on Mental Diseases which has for many years, and as much in recent years as in the past, given the seal of its approval to this matter of a serious attack on our fundamental problem. It is no doubt on account of this policy that the majority of scientific papers produced at annual meetings of the American Medico-Psychological Association are by Massachusetts men or by men trained in Massachusetts.

With respect to the scientific results of the "Waverley Researches in the Pathology of the Feeble-minded," this is not the place in which to enter into detail.

Some advance is being made into the problem of the correlation of mental and cerebral measurements. The idea has been to lay down as an underpinning to the mental tests, so popular in recent years, a base line of cerebral measurements. The whole work looks in the direction of the correlation of brain and mind, that is, the less brain the less mind, and *vice versa* (unless "less" and "more" are not taken too quantitatively). There is some hope that a steady basis of comparison will be afforded if the work can be continued over a period of years as contemplated by Dr. Fernald and the undersigned.

The burning question concerning the feeble-minded is always whether feeble-mindedness can be prevented. A number, of course not large, of theoretically preventable cases have been shown to exist; for example, feeble-mindedness due to syphilis, and feeble-mindedness as an ultimate result of brain disease, probably due to poliomyelitis. These two causes do not bulk very

much in the total problem of feeble-mindedness, but it is to be hoped that other preventable cases can be discovered.

Last year some work upon the group classification of mental diseases was mentioned. This year a further study of these groups was undertaken, and the first paper entitled "A Key to the Practical Grouping of Mental Diseases" was followed by a paper on "The Genera in Certain Great Groups of Mental Disease." This work embodies in part an endeavor to study the actual process of diagnosis of diseased groups somewhat on the line taken by botanists or zoölogists in their systematic diagnosis of plants or animals.

A study of the different classifications of mental disease in vogue in different parts of the United States was made, and a remarkable unanimity was determined in most of the classifications. This unanimity did not always extend to unanimity of nomenclatures, which is perhaps in itself not altogether desirable. An endeavor is made to put into an eliminative order of diagnoses, following the botanical plan, all the diseases included in the recent classification of the American Medico-Psychological Association, adopted by the Commonwealth for its statistical data and by the Surgeon-General of the army for Federal purposes. This key method is to be presented at meetings of the American Medical Association and of the American Neurological Association from the different points of view of the general practitioner and the specialist.

After the declaration of war a good deal of time was spent by the undersigned upon the literature of so-called shell-shock, and a collection of cases from the literature of the belligerents, 589 in number, has been made for publication. The purchase of a certain number of the book (to be entitled "Shell-Shock and other Neuropsychiatric Problems of the War, presented in 589 Case Histories from the Literature of the Belligerents") has been guaranteed by the National Committee for Mental Hygiene, and these copies will be given to medical officers in the army and navy. Others have guaranteed the purchase of other copies for similar distribution, notably Mr. A. T. White and Mrs. Zoe D. Underhill.

## V. Syphilis Investigation and Treatment.

The publication of the volume "Neurosyphilis, Modern Systematic Diagnosis and Treatment, presented in 137 Case Histories," by E. E. Southard and H. C. Solomon, with an introduction by James J. Putnam, renders it unnecessary to go into detail concerning the syphilis investigation.

The great issue in the matter of neurosyphilis and its treatment is whether the salvarsan treatment has really helped to cure genuine cases of general paresis. The point of view taken by Dr. Solomon and myself in the above-mentioned book is that "in any particular case, during a good part of the early months or years, it is difficult or impossible to tell the paretic from the nonparetic forms of profuse neurosyphilis by any combination of clinical observations and tests. Accordingly, we ought therapeutically to approach all cases of neurosyphilis without bias or nihilistic prejudgments." We think that the old distinction of syphilis and parasyphilis, so striking and apparently satisfactory when introduced by Fournier, ought to be dropped as a false distinction. It would thus be very unwise to call every case of treated neurosyphilis paretic if it failed to get well, and nonparetic if it happened to get well; such a distinction would be scientifically worthless.

There is, however, so much dispute concerning what we mean by clinical and laboratory "recovery" that we have adopted another standard, — the sheet anchor of judgment is whether a patient after such and such treatment becomes capable of selfsupport. We investigated some 300 cases of paretic neurosyphilis (general paresis) that had been treated. We found only 5 of these 300 untreated cases capable of self-support after a period of months or years of observation. There were 10 more that appeared to be in remission, although not capable of self-support. Here, then, is a percentage at the outside of 5 per cent. recovery remission.

We studied a strictly comparable series of treated cases, and found that 50 of the 200 cases, or 25 per cent., were capable of self-support when investigated in July, 1917. We regard the 300 untreated and the 200 treated cases as strictly comparable in all respects, inasmuch as all cases came from the same source, namely, the Psychopathic Hospital material. It must be remembered that this material is probably more hopeful than the material of the asylums, inasmuch as one of the concrete benefits of planting a psychopathic hospital in a community is the attraction of patients from the community into the hospital at an earlier stage in their disease. Accordingly, in the above-mentioned work and in subsequent work we have not claimed a cure for paresis. We claim that no man can in the early phases of neurosyphilis

tell whether he is dealing with general paresis or with less severe forms of neurosyphilis. Accordingly, we feel that all such cases should be given the benefit of treatment.

Of course, it may be well doubted whether the so-called cures involved in these cases that we find capable of self-support are in any sense permanent. Some authors claim (although the salvarsan treatment has certainly not been in existence long enough to warrant any such claim) that the end of the story is that all these treated cases eventually relapse. Such may be the case; but even if so, it seems worth while to treat these cases so that their economic and earning capacities may be maintained for a period of years for the sake of their families. Moreover, we may learn from neurosyphilis methods of treatment much that is of value in other forms of nervous and mental disease.

The work which had to be abandoned by Dr. Solomon has been taken up by Dr. Lawson G. Lowrey in the intervals of his time as chief medical officer of the Psychopathic Hospital, and plans are afoot by which the 400 cases now under treatment shall be kept sight of during future years, so that the value of this large and unique experiment of the Commission on Mental Diseases may not be lost.

An important part of this work as mentioned in previous years has been the social service part of the work. Mrs. Maida Solomon's work in this direction has been continued by Mrs. Margery Wheeldon.

The importance of the neurosyphilis problem in war is considerable. The Germans noted, a decade or so after the war of 1870, an increase of neurosyphilitic diseases in their ex-soldiers, namely, an increase of tabes dorsalis and general paresis. We must be similarly on the lookout, and must take what preventive measures may be taken.

## VI. EXCERPTS FROM ANNUAL REPORTS OF INSTITUTIONS.

# Worcester State Hospital.

The superintendent speaks of the gratifying results in many instances of the use of salvarsan in the treatment of general paresis and other syphilitic affections. He states that the vast majority of cases received in Worcester represent failures in outside practice, and do not reach his hospital until in an advanced state of the disease. This point is of the greatest importance, and indicates that the Worcester district requires psychopathic hospital advantages such as would be possible under the Statewide extension act passed by the Legislature.

A complete outfit of X-ray apparatus has been purchased during the year.

The laboratory report mentions 1,496 routine analyses, and gives a list of 72 autopsies with their major anatomical diagnoses. After the resignation of Dr. Gosline, routine work was carried on by the laboratory assistant, J. H. Stean.

## Taunton State Hospital.

The superintendent again speaks of the mental clinics held in Taunton, Fall River and New Bedford.

The position of pathologist vacated by Dr. Myerson has not been filled.

### Northampton State Hospital.

The trustees speak of the desirability of definite plans for the provision of all the insane of the four western counties, looking forward ten, fifteen or twenty years. Concerning this the undersigned would like to note that laboratories should be provided for the proper study of these cases, since the western counties afford a better opportunity for the study of old New England stock than do the eastern counties. A study of the brains in so-called New England degeneracy would be of the greatest importance, and there has no doubt been a considerable neglect of this particular scientific point of view at Northampton State Hospital.

The trustees remark that comparisons of cost do not show that institutions in the eastern part of the State can maintain patients more economically than they are maintained at Northampton. It seems to the undersigned that more science and less economy are indicated, particularly as the amount of money spent upon the proper scientific analysis of cases, both from the post-mortem and the clinico-pathological point of view, is an exceedingly small fraction of the amount spent for general purposes.

The superintendent notes the installation of laboratory examinations of 131 patients, the blood tests being positive in 32, or about 1 in 4. It is a question whether this percentage is the actual percentage of the institution, since many of these tests may have been undertaken in clearly syphilitic cases, and other cases rather obviously not syphilitic may not have been tested.

The report of the superintendent concerning the treatment of

# 1918.] PUBLIC DOCUMENT — No. 117.

syphilitics with diarsenol is somewhat less favorable than that of the Worcester Hospital. The superintendent states that "the pathological work has increased to such an extent as to make it advisable to enlarge our staff so that one assistant may give his whole time to this line of work."

Interesting details are given of the clinics held at Springfield, Pittsfield and Greenfield.

The superintendent recommends a branch hospital, to be situated perhaps near Springfield, "where patients may come for consultation and advice; where temporary care and treatment may be provided, thus possibly precluding the necessity of commitment to the hospital at Northampton; and where scientific work in relation to mental diseases and intensive study of cases may be carried on." The undersigned would remark that the phrase "thus *possibly* precluding" is not so strong as it might be, since the work of the Psychopathic Hospital in Boston proves that the necessity of the commitment for some cases is *absolutely* precluded by its work.

## Danvers State Hospital.

Danvers State Hospital has a daily average population of nearly 1,500 patients. The superintendent makes the important statement — important from the standpoint of efficiency — that at least 8 assistants in addition to a pathologist are required in an institution of this size and type. The institution has an admission rate of 800 patients. If we add the pathologist and the superintendent to the 8 other medical officers we shall have a staff of 10 medical men.

Some years ago the undersigned showed from an analysis of certain German statistics that the German hospitals had on an average a physician to every 125 patients, that is, in institutions as nearly comparable as possible with the State institutions of our country. This standard would require some 12 physicians for the Danvers staff.

The superintendent notes that his medical staff has been reduced to four assistants, partly on account of military exigency and partly on account of the low salaries that are offered to-day.

Laboratory activity has been confined to routine work and gross anatomical work by the clinicians.

Danvers, like Worcester, reports excellent results and remarkable improvements in a number of cases with the intensive treatment of neurosyphilis by intravenous injections of diarsenol.

Three patients with all the classical symptoms of paresis at the time of admission have now gone back to their usual occupations.

The report of clinical groups made by the different physicians of the hospital occupies 14 pages.

Miss Hannah Curtis reports 118 social case investigations during the year, involving 181 home visits. An assistant social worker, Mrs. E. J. Field, has been appointed.

## Boston State Hospital.

The superintendent notes the higher percentage of aged and feeble cases in the Boston State Hospital as compared with others in this State, a condition due to the fact that able-bodied patients are more likely to be committed to hospitals at a distance.

The pathologist, Dr. Mary E. Morse, was granted an indefinite leave of absence beginning September 16.

Dr. Geneva Tryon, who had been engaged in the combination of clinical and pathological service, resigned April 14 to become pathologist at the Pontiac State Hospital, Pontiac, Mich.

## Westborough State Hospital.

The trustees speak of the information obtained by the routine examination of the blood of patients by the Wassermann test. "It seems as if the time had come already when the positive cases should be reported, upon discharge from the hospital, to the State Commission on Mental Diseases or to the State Department of Health, with the expectation that such an official body will be authorized to supervise and direct such diseased persons during their lives, to safeguard those with whom they associate, and to prevent an inheritance of disease by descendants."

The superintendent notes a considerable decrease in the number of admissions of women inebriates and narcotic habitués (decrease of 59; 109 such patients dealt with during the year). Twenty-six paretics have been treated with semi-weekly injections of diarsenol, and among these there have been 8 remissions.

A series of 18 scientific papers by past and present members of the staff was presented at a meeting which celebrated the thirtieth anniversary of the opening of the hospital. 1918.]

## PUBLIC DOCUMENT - No. 117.

## Grafton State Hospital.

About three pages are devoted to the work of neurosyphilis. The intraventricular treatment was used for the first time in Massachusetts in the Grafton State Hospital during the year; there were 15 operations for the purpose. The following table shows the number of different forms of neurosyphilis treated: —

Paretics, .									48
Cerebrospinal syr									11
Tabes,									3
Secondary lesions	of syph	nilis,							<b>2</b>
Intravenous treat	ments,								763
Intraventricular,				•					19
Subdural, .									
Intraspinous,					:	•	."		38

The superintendent calls attention to the need of a hydrotherapeutic equipment at Grafton State Hospital, which, although the largest hospital in the State, has, with the exception of one tub for continuous baths, no therapeutic apparatus.

## Medfield State Hospital.

The trustees speak of the apparent and even urgent need of a resident pathologist, and they wish to bring the matter forcibly to the attention of the Governor and Council.

Thirty-one deaths followed dysentery in the months of August and September. Neither a laboratory nor a pathologist was available, so that the possible benefits of a laboratory investigation, such as was, for example, made at the Danvers State Hospital in 1908, could not be secured.

One hundred and ninety-six doses of diarsenol were given to 14 patients, 8 of whom improved physically and 1 of whom made an apparent mental and physical recovery. The undersigned would note this remarkable feature in the treatment of material at an asylum filled with cases regarded as chiefly hopeless.

The superintendent emphasizes again the importance of a laboratory and a pathologist. He says, "The failure to possess a well-equipped laboratory and to have a competent pathologist cannot be defended if the best interests of the patients are to be considered paramount." The report of clinical groups following the method introduced in the Danvers State Hospital reports some years since by Dr. George M. Kline fills 14 pages.

### Gardner State Colony.

The superintendent notes the extension of family-care service. There has been an average of 44 patients cared for in families during the year.

The fifth recommendation among seven approved by the Commission on Mental Diseases is that for a hospital building for 50 sick patients.

The undersigned would like to see provision made for autopsies in cases dying at Gardner State Colony, on account of the importance of investigating the brains of "workers" so that these may be compared with those of a nonworking nature.

### State Infirmary.

The superintendent reports many interruptions of the work in . the laboratory.

## Bridgewater State Hospital.

The performance of 16 post-mortem examinations is noteworthy.

A heating and hot-water system has been installed at the morgue.

The patients and employees were vaccinated against typhoid fever.

## Monson State Hospital.

The essential parts of the laboratory work have been carried on by a technician under the direction of Dr. Greene. Dr. Greene has also cared for the X-ray work.

### Massachusetts School for the Feeble-minded.

The trustees speak of Dr. Fernald's services in connection with war activities as thoroughly approved by them. They feel that this work is a part of his public duty, and it is the duty of the trustees to aid him in all respects.

There is a private fund now amounting to about \$56,000, the income of which is used for the prosecution of scientific work for the benefit of the feeble-minded and in publishing literature on the feeble-minded (see Section IV. of this report for some account of laboratory work upon the material of this school). The superintendent delivered 23 public lectures during the year, and the superintendent and staff conducted 36 clinics for college classes, teachers, physicians and social workers.

Twenty-three of the former patients of the Massachusetts School for the Feeble-minded are either in the army or in the navy.

Out-patient clinics were held at Waverley every Thursday, and also every month at Worcester, Fall River, New Bedford and Newton. There were 1,127 patients who sought advice in these clinics, of whom 551 were new cases and 469 of whom received a thorough mental examination.

The superintendent states that many of the adult female cases received have venereal disease when admitted. These cases require long treatment and quarantine. There should be a special building for these cases.

There is urgent and pressing need for new fireproof accommodations for our library and laboratory purposes. From an economical point of view, the best work being done for the State, as far as the feeble-minded is concerned, is the scientific research which has for its ultimate purpose the diminution of the amount of feeble-mindedness.

The present needs of the feeble-minded are as follows: --

"1. Some definite State authority should have friendly guidance of all mental defectives in the State who are not adequately cared for by their friends. Those who can lead wholesome, harmless lives in the community should be allowed to do so.

"2. This central authority should have authority to safeguard in institutions those who need such institutional care.

"3. There should be a State-wide census of the feeble-minded.

"4. There should be clinics for mental examinations within easy access of all parts of the State.

"5. There should be required extension of special classes for mental defectives in the public schools.

"6. There should be special treatment by the courts of defective delinquents, and suitable institutional provision for this class.

"7. Development of the third school for the feeble-minded."

## Wrentham State School.

The trustees speak of the recent spread of the idea that feebleminded cases may be returned to the community under prudential and supervisory conditions. They call attention to the presence in school of inmates "who are not the passive sort of feebleminded; who are not simply handicapped by mental defect, but who are actively perverse."

The superintendent reports a few sporadic cases of diphtheria. Considerable dental work has been done. He states that the training and care of the feeble-minded is primarily a medical problem. The institution has been divided into medical districts, each district being under the immediate supervision of an assistant physician. "This arrangement places all the children under medical supervision, — in the schools, on the playgrounds, in the cottages in which they live and at their various occupational activities; in fact, the daily life of the children is closely watched over by a physician."

Local clinics for the examination of troublesome and doubtful cases in the community have been established in Attleboro and Brockton.

"The practice of placing out in the community selected boys and girls has been carried out in a careful and conservative manner."

#### NURSING SERVICE.

In October, 1916, the Commission appointed a committee, consisting of Drs. Elisha H. Cohoon as chairman, John A. Houston and George L. Wallace as a Central Board of Examiners, to arrange for putting into operation a uniform curriculum in the training schools for nurses in the State hospitals. The following is their report: —

Report of the Central Board of Examiners, Training Schools for Nurses, Massachusetts State Hospitals.

To the Massachusetts Commission on Mental Diseases.

Agreeable to your letter of October 4 in which you designate a committee, consisting of Dr. Elisha H. Cohoon, as chairman, and Dr. John A. Houston and Dr. George L. Wallace as a Central Board of Examiners, to arrange for the putting into operation a uniform curriculum in the training schools in the State hospitals and to recommend textbooks for the same, we respectfully submit the following report: —

The first meeting of this Board of Examiners was held at the Psychopathic Hospital on October 13. The subject was generally discussed, and it was decided to meet with the superintendents of nurses so that the subject might have the fullest discussion and have the benefit of their experience and wishes. The

# 1918.] PUBLIC DOCUMENT — No. 117.

second meeting was held on October 20 at the Grafton State Hospital, Summer Street department. There were present Dr. John A. Houston, Dr. James V. May, Dr. George L. Wallace and Dr. Elisha H. Cohoon, and the superintendents of nurses from the following hospitals: —

Boston State Hospital.	Grafton State Hospital.
Danvers State Hospital.	Northampton State Hospital.
Taunton State Hospital.	Monson State Hospital.
Medfield State Hospital.	Westborough State Hospital.
Worcester State Hospital.	- •

The matter of selecting uniform textbooks was taken up first, and the following textbooks selected: ---

Anatomy and Physiology,				Kimber.
Bacteriology, .				Stoney.
Materia Medica,				Paul.
Practical Nursing,				Maxwell & Pope.
Hygiene (reference book),				McIsaac.
Ethics (reference book), .				Aikens.

#### For the Senior Year.

Obstetrics a	and	Gyne	ecolo	gy,				DeLee.
Dietetics,		ĺ.						Farmer.
Dictionary,		•						Gould.
Medicine (r	refei	rence	boo	k),				Stevens.

It is recommended that the examinations be conducted by the Central Board of Examiners, or some suitable committee, once a year, and that the examinations take place during the third week in June. It is also recommended that examinations be conducted in the following subjects: —

## Junior Year.

Physiology, .				. ]	one paper; ten questions.
Anatomy, .				. )	one paper, ten questions.
Bacteriology, .				. ]	one paper; ten questions.
Hygiene,				. ]	one paper, ten questions.
Materia Medica,				•	ten questions.
Practical Nursing,	•		•	. ]	ten questions.
Care of Insane,				• • ;	f ten questions.

## Senior Year.

General Medicine,			· ) one nemeri ten questions
Pediatrics, .			$\left. \right. \right\}$ one paper; ten questions.
Insanity,			. one paper; ten questions.
Social Hygiene,			$\cdot$ one paper; five questions.
Hydrotherapy, .			. fone paper, nive questions.
Dietetics,	•		. five questions.

We recommend that an average of 75 per cent. must be made on the written examinations before a pupil is promoted from one year to another or entitled to become eligible for graduation. A mark of 50 per cent. is to be allowed in any one subject, and promotion is allowed to take place if failure is made in one subject only, but the required mark in this particular subject will have to be attained before graduation

In addition to the above report we wish to make the following recommendations: —

We recommend that the Massachusetts Commission on Mental Diseases appoint a committee on training schools, and we suggest that it possess the following functions and powers: —

1. To make recommendations for the establishing of a uniform curriculum for all the State hospitals.

2. To prepare a printed, uniform, detailed schedule for the courses.

3. To make an annual report to the Commission containing advisory recommendations.

4. To make arrangements for affiliations in general hospitals.

5. To consider such matters relating to training schools in the State hospitals as may be referred to it by the Commission.

6. To act as an examining committee for final examinations in the junior and senior years of the training school course for nurses.

7. To have the various training schools visited at least once a year by at least one member of the committee.

8. That the committee meet at the call of the chairman or at the request of the Commission.

We further recommend: ---

1. That the superintendents of nurses be encouraged to organize and meet with this committee at least once a year.

### 1918.] PUBLIC DOCUMENT — No. 117.

57

2. That there be distinctive, standard uniforms for attendants, pupil nurses and graduate nurses, to be determined by the committee.

3. That uniform diplomas be given to the nurses and uniform certificates to the attendants.

Elisha H. Cohoon. George L. Wallace. J. A. Houston.

The Commission, at its meeting Nov. 6, 1916, voted to accept the report of the above committee. It was further voted to appoint Drs. Elisha H. Cohoon as chairman, George L. Wallace and James V. May as a Committee on Training Schools, with the functions and powers indicated in the report of the Central Board of Examiners.

SEPT. 12, 1917.

Dr. GEO. M. KLINE, Director, Commission on Mental Diseases, Room 36, State House, Boston, Mass.

The Committee on Training Schools appointed by your Commission as per letter of Nov. 8, 1916, respectfully submits the following report.

It would seem that this report should include the work done by them under authority by your Commission in your letter of Oct. 4, 1916. Briefly, the work done by this committee has been as follows: —

1. There have been held six meetings of the committee, two of which were attended by the superintendents of nurses in the various training schools.

2. A standardized curriculum was adopted and put into force Oct. 1, 1916, for nurses and also for attendants, a detailed report of which you already possess.

3. Uniform textbooks were prescribed and used in the various schools, a detailed report of which you already possess.

4. Standard uniforms for both nurses and attendants were arranged for and put into force. A copy of these uniform regulations accompanies this report.

5. In June uniform examinations were given to the two classes in the various hospitals at the same time. The method of conducting these examinations was as follows: Each hospital was requested to send in ten questions on each subject. From these ten questions, collected from all the hospitals, an examination paper, consisting of fifteen questions any ten of which could be answered, was made up in each subject. Examinations were all held at the same hour in each subject throughout the State. Copies of the examination questions were sent to the superintendent, with directions for the examination papers to be immediately sealed and returned to the chairman of the committee. The names on the examination papers were then recorded, and a red-ink number substituted on the paper, the key being kept by the committee. All the collected papers on any particular subject were then sent to one hospital with the request that one physician examine. Different subjects were sent to different hospitals. All evidence of the identity of the writer of any individual examination paper was, of course, absent. The papers being returned, the key was referred to and the proper marking given. Two hundred pupil nurses took the examinations. The percentages of failures are already in your possession. The Westborough, Danvers and Boston State hospitals did not present senior nurses for examination. In each instance it appears that the change of the schedule had interfered with their seniors coming up for examination. This will not recur.

6. A uniform diploma has been arranged for.

7. The required affiliation has been obtained in all of the schools.

At the beginning it was well appreciated by the committee that the work as outlined for the training schools and new courses to be adopted would be more or less in the nature of an experiment. As the result of one year's experience the committee feels that although in general the results of its work in the standardizing of training schools have been better than was anticipated, yet it has learned that other changes are necessary.

Before the further changes can take place as suggested from the year's experience the matter will have to be taken up again with the superintendents of nurses.

It was found that the training course for attendants as outlined was practically useless as far as it applied to the male attendants, and it has been strongly suggested by some of the superintendents, and practically agreed to by the committee, that the course for male attendants shall be changed from a one year's course to a course of ten or twelve lectures, which will be given one after the other throughout the year. The male attendants, it was found, did not stay long enough to take the prescribed course, and it would seem that the best that can be

### 1918.] PUBLIC DOCUMENT — No. 117.

done in the way of instruction for male attendants is to give them a few practical lectures on the care of the insane.

It is felt that in general the course as outlined can be, with some few changes, continued for the female attendants, although in some schools the attendants' course has not been particularly appreciated by the attendants themselves.

On August 15 you submitted for the consideration of the committee an outline for a special form of training in the insane hospitals submitted to you by Mrs. Hopkins, a trustee of the Boston State Hospital.

At the last meeting of the committee this proposed new curriculum was considered, and the following conclusions arrived at: ---

1. The suggestion that the term "psychiatric assistant" should be used was felt to be very unwise. So long as these institutions are called hospitals and the medical officers known as physicians and the inmates known as patients, the one caring for them should be known as nurse or attendant. The term "psychiatric assistant" would be confusing to the patient and never understood by the general public.

2. It cannot be seen that there is any special merit to the course as outlined over the present course that is in operation now.

3. The committee feels that now it has gotten started on its work it would be unwise to make any radical changes before it has been shown that the course now in operation is not going to meet the demands of the hospitals.

4. The committee is not in sympathy with the suggestion of this course as outlined by Mrs. Hopkins being tried in any one hospital, such as the Boston State Hospital.

You also submitted for our consideration the outline of a textbook of bacteriology by Dr. Morse. The committee approves the idea of a special book of bacteriology for nurses, but the adoption of this particular book would, of course, depend upon its merits compared with other books on bacteriology for nurses that might be published.

The correspondence with this committee has been heavy and is now in the possession of the chairman. The committee assumes that the Commission will require only a summarized report, but the correspondence and minutes of the various meetings held by this committee can be forwarded to the Commission if the Commission so desires.

In conclusion, we feel that the work of this committee has been

60

considerable, and the demand on our time not always easy to meet, yet notwithstanding this the work has been enjoyable. We believe that an advance step has been made in the care of the insane in this State by the standardization of the hospitals' training schools. On the whole, we received excellent co-operation from the superintendents and superintendents of nurses of the various hospitals, and we wish to thank you for your support in our work.

Respectfully submitted,

ELISHA H. COHOON, GEORGE L. WALLACE, JAMES V. MAY, Committee.

### SPECIFICATIONS FOR UNIFORM.

## 1. GRADUATE NURSES.

Graduates are to be allowed to wear a white uniform, which is to be a one-piece dress of a smooth weave, either linen, Indianhead, poplin, etc., with collar of same material as uniform, opening in front, sewed to dress so that it can be worn low in summer or high in winter. It is to have Gibson plait in front, watch pocket on waist, one patch pocket on right side of skirt; to be made with a belt, and to be long, with four or five buttons on cuffs.

Shoes to be low-heeled and either white or black.

## 2. Pupil Nurses.

The material of the dress is to be blue and white stripe, of the pattern used in the Worcester, Grafton and Taunton State hospitals. The waist and skirt are to be made after the pattern of the Grafton State Hospital uniform, the latter to be 5 inches from the floor. The sleeve is to be three-quarter length; to come 3 inches below the elbow. The cuff is to be after the pattern as used at the Grafton State Hospital; to measure 4 inches on outside and 3 inches on inside seam. The collar is to be the same as that used at the Grafton State Hospital, known in trade as the Elsa, manufactured by the Corliss-Coon Company. The bib is to be after the style of the

# 1918.] PUBLIC DOCUMENT — No. 117.

Grafton State Hospital's sample. Shoulder straps to be 3 inches wide. The apron is to be after the sample used at the Grafton State Hospital, with a 2-inch belt and 6-inch hem, meeting at the back, and must show 1 inch of uniform at bottom. The cap is to be the same as that used at Grafton State Hospital. Shoes to be low-heeled and black.

## 3. Probation Nurses.

The probationers are not to have any prescribed uniform. They are to wear the *regulation apron* and some *serviceable* wash dress.

## 4. Attendants' Uniform.

Plain blue material, — chambray, after the sample used at the present time for nurses' uniform at Danvers. The dress is to be one piece, and aprons are to be the same as used by the nurses. There is to be no bib, but cap the same as pupil nurses'.

# WRENTHAM STATE SCHOOL.

The superintendent reports that clinics for the examination of troublesome and doubtful cases in the community have been established in Brattleboro and Brockton, and a clinic for the examination of children in the community is also conducted at the school every Wednesday. Many difficult children are examined at this clinic, and parents, guardians and teachers are advised as to the best methods to be used in caring for them and training them.

# COMMITMENTS FOR OBSERVATION AND TEMPORARY CARE FOR THE WHOLE STATE.

The number of commitments for observation (under section 43, chapter 504, Acts of 1909) was 131 for the year. The period designated by the judges in the various cases was usually thirty days.

Of these cases, 36 were subsequently committed, 1 was recommitted for observation, 72 were discharged, 5 were committed to other institutions, 3 were admitted voluntarily, 1 was transferred to another institution, 1 died, 1 was discharged to the Commissioner of Immigration and 11 were remaining at the close of the year.

Under chapter 307 of the Acts of 1910, requiring that emergency cases which come into the care or protection of the police in Boston be taken to the Boston State Hospital for temporary care, and forbidding the use of prisons, jails or penal institutions for such persons, 355 were taken to the Psychopathic Department of the Boston State Hospital. Of these, 87 were subsequently regularly committed to the Boston State Hospital, 95 were committed to other institutions, 143 were discharged, 6 were admitted voluntarily, 1 was admitted voluntarily to another institution, 3 were committed for observation, 1 was readmitted in emergency, and 11 were returned to institutions. Eight such cases were remaining at the close of the year.

There were 13 admissions under section 34, chapter 504 of the Acts of 1909, which provides for the apprehension of a patient before examination and commitment. Four of these were subsequently committed and 8 discharged, and 1 was committed to another institution.

Remaining Sept. 30, 1917,	-	11	8	51	133	1

Under chapter 174 of the General Acts of 1915, allowing the admission of patients for ten days for temporary care, 2,049 cases were admitted, of whom 810 were subsequently committed, 255 were committed to other institutions, 36 were committed for observation, 678 were discharged, 124 were received under the voluntary status, 2 were admitted voluntarily to other institutions, 7 were returned to institutions, 31 were readmitted as emergency cases, 6 were readmitted under chapter 174, 32 died, 16 were discharged to Commissioner of Immigration, 1 was on escape, and 51 were remaining at the close of the year.

There were 44 emergency admissions under section 42, chapter 504, Acts of 1909, of whom 24 were regularly committed, 15 were committed to other institutions, 4 were discharged, and there was 1 remaining on September 30.

Voluntary admissions numbered 895, of whom 57 were regularly committed, 33 were committed to other institutions, 580 were discharged, 69 allowed to go on visit, 3 escaped, 13 died, 1 was committed for observation, 1 was admitted under chapter 174, 1 was returned to another institution, 4 went voluntarily to other institutions, and 133 were remaining at the close of the year.

It is to be noted with interest that during the year covered by the report there were 895 voluntary admissions, 2,049 under chapter 174, General Acts of 1915, and 355 under chapter 307, Acts of 1910, making a total of 3,299 patients who were admitted without any action of the court or judge or other very formal proceeding. Of these 3,299 cases thus admitted, 1,401 were discharged without commitment, 45 died before commitment, 137 signed voluntary requests, and 133 voluntary patients continued their stay in the voluntary status, no commitment being considered necessary, making a total of 1,716 persons who secured the benefits of treatment in our public or private hospitals for the insane without the formality of a procedure before a judge, which would have been attended with delays, legal exactions, semi-publicity and the stigma of having been pronounced insane, all of which was thus obviated to the comfort and satisfaction of the patients and friends.

# THE STABILITY OF SERVICE

in the institutions averages about the same as the previous year. There were 2.80 rotations of all employees, compared with 2.60 rotations the previous year; 3.18 in the nursing staff, compared with 2.87 the previous year. The maximum stability for the whole service was at the Gardner Colony, where there were 2.12 rotations; and for the nursing staff, also at the Gardner Colony, where there were 2.36 rotations.

The average length of the interval between rotations of all employees was 4.33 months; of all nurses, 3.82 months; men nurses, 2.96 months; women, 4.70 months.

The average shortage of employees was 15 per cent.

### THE CAPACITY FOR PATIENTS

76

in all the institutions Dec. 1, 1917, was 17,116, compared with 16,785 the previous year, an increase of 331 beds. The whole number of patients on Dec. 1, 1917, was 18,140, compared with 17,629 the previous year, an increase of 511. Hence there is a deficiency of provision for 1,024 patients, or 5.98 per cent.

## THE CAPACITY FOR THE INSANE

in State institutions Dec. 1, 1917, was 13,431, an increase of 241 beds. The whole number of patients on Dec. 1, 1917, was 14,311, as compared with 14,001 the previous year, an increase of 310. Hence there is a deficiency of provision for 880 patients, or 6.55 per cent.

There are no new buildings under construction.

1918.]

Working Capacities of Institutions --- Concluded.

78

[Jan.

<sup>1</sup> Decrease.

1918.]

# THE PUBLIC INSTITUTIONS.

# WORCESTER STATE HOSPITAL.

Opened in January, 1833. Present capacity, 1,454.

Valuation of the plant, per capita of capacity, \$1,544; real estate, \$1,403; personal, \$141.

Daily average number of patients on books, 1,746; in hospital, 1,510; in family care, 47; on visit and escape, 189.

Number on books Oct. 1, 1917, 1,774; in hospital, 1,540; in family care, 45; on visit or escape, 189.

All admissions, 701.

Admissions as insane, inclusive of temporary-care cases, 695. First cases of insanity, 427.

Voluntary admissions, 13.

Admissions as inebriate, 1.

# Finances.

Expenditures from maintenance funds, \$431,029; total receipts, \$54,716; being \$32,369 from private patients, \$19,807 from reimbursing patients, \$2,540 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.25, the same less repairs and improvements, \$5.06.

Weekly per capita cost of whole service, \$1.88; ward service, \$0.77.

One person employed for every 4.59 patients; 1 nurse for every 8.79 patients.

Average monthly wage for all persons employed, \$38.60; for nurses, \$30.24; men, \$31.99; women, \$28.73.

# Extract from Trustees' Annual Report.

After years of agitation the hospital's sewage is now a part of that of the city of Worcester, and all possible menace to the health of the adjacent community has been averted.

The contemplated standardization of salaries threatens to deplete the medical staff when promotion of those who have shown a capacity for excellent work does not bring an adequate advance, but appointment to the staff of another institution will secure the proper increase.

One need, stated last year, no longer exists. Through the generosity of an interested friend funds were provided for the purchase of additional land at Hope Cemetery. This has enabled the hospital to care for its unclaimed dead. To this friend we would express our deep gratification.

# Extract from Superintendent's Annual Report.

In considering the type of mental disease in the readmitted cases dementia præcox stands easily first, with manic-depressive, alcoholism and general paralysis following.

Pneumonia has been by far the greatest cause of death, followed by different forms of heart disease, general paralysis and tuberculosis.

The general health of the house has been good. A few cases of contagious disease have developed, all of which have a favorable outcome. Strict quarantine quickly controlled the spread of disease and no general outbreak occurred.

With the increasing number of patients has come increased work and responsibility for the medical staff. This, too, at a time when the national demands are imperative and must be met. Although lessened in numbers, the whole staff has responded to the emergency in a way which is most gratifying and commendable.

In furtherance of the medical work a complete outfit of X-ray apparatus has been purchased which will soon be installed, and it is expected to add much to our ability to more accurately diagnose and treat many cases which have hitherto been obscure.

The work of the therapeutic industries has prospered and has done much to interest our patients and to assist in promoting recovery. I regard this work as one of the most important remedial agencies that we have at hand with which to combat that apathy and lack of interest which is too often prominent in cases of mental disease. The Christmas sale of articles manufactured by the patients in this department was quite successful. Quite a little work has also been done by our patients in aid of the Red Cross.

An unusual number of changes have occurred in the staff during the past year, in some instances due to the fact that positions could be had in other institutions at considerably increased salary, and in others, to the exigencies of the military service.

Sixteen persons who were in the employ of this hospital have resigned and enlisted in the United States service. I am greatly gratified at the loyal attitude of these men, and feel that they will give a good account of themselves. I hope that all may return to us.

On the farm, as in other departments, it has been difficult, much of the time impossible, to secure, at the wages which we have been able to offer, farm laborers in sufficient number to properly carry on the work there. More than ever have we been dependent upon the assistance derived from the labor of patients. Notwithstanding this handicap the farm has been very productive and profitable in its general operations. The abundant supply of fresh vegetables has contributed in no small way to the maintenance of our large family, and has very materially assisted in the conservation of our food supplies.

Our general dietary has been altered, so far as possible, to co-operate

with the efforts of the food conservator to so control home consumption as to interfere as little as possible with the proper feeding of our national armies. A special effort has been made to reduce our consumption of meat, sugar and wheat. A general diet has still been found possible, even with a limitation in the use of the above-mentioned articles of diet. It is highly probable that our food conservation experiences will have valuable lessons, which, when once learned, will teach us how to permanently conserve our food supplies, even when the urgency of the present national emergency has passed. That our farm products can be made to contribute more largely to our support I am well persuaded.

I again call your attention to the requests for special appropriations as outlined in the reports of the last two years. The same needs exist, even intensified. If the exigency of the times forbids attention to all our wants, perhaps the congregate dining room and the ward plumbing are among the most urgent at the main institution.

The new building for 50 men at Hillside has been completed, but as an adequate water supply has not yet been provided nor sewage disposal arranged for it will probably not be possible to enter into occupancy before spring. For a time, while the amount remains small, the sewage can well be taken care of by surface irrigation. As a permanent means of sewage disposal this method would hardly suffice. With the necessary increase in the numbers of employees at this farm colony additional housing facilities should be provided for them. This can be accomplished either by alteration and enlargement of the existing farm buildings or by the erection of a new building near the present structures.

# TAUNTON STATE HOSPITAL.

Opened in April, 1854. Present capacity, 1,209.

Valuation of the plant, per capita of capacity, \$775; real estate, \$638; personal, \$137.

Daily average number of patients on books, 1,538; in hospital, 1,293; in family care, 52; on visit or escape, 193.

Number on books Oct. 1, 1917, 1,532; in hospital, 1,365; in family care, 47; on visit or escape, 120.

All admissions, 578.

Admissions as insane, inclusive of temporary-care cases, 576. First cases of insanity, 403.

Voluntary admissions, 7.

#### Finances.

Expenditures from maintenance funds, \$394,164; total receipts, \$43,855; being, \$20,555 from private patients, \$20,473 from reimbursing patients, \$2,827 from other sources. Weekly per capita cost of maintenance computed on net expenses, \$5.57; the same less repairs and improvements, \$5.37.

Weekly per capita cost of whole service, \$1.92; ward service, \$0.70.

One person employed for every 4.70 patients; one nurse for every 6.66 patients.

Average monthly wage for all persons employed, \$40.79; for nurses, \$29.89; men, \$32.29; women, \$27.57.

# Extract from Trustees' Annual Report.

The shortage of pupil nurses, the enrolling of eighteen physicians, nurses and other employees in the national service, a wonderful response by employees and patients in the war-relief work, tell the outstanding features of the effect of the war year upon our institution. Loyal and generous responses have been made in each new campaign, — war gardens and food saving, no less than Liberty Loans, Red Cross and camp funds.

A step toward an immense improvement was made this year when the Legislature authorized an exchange of land by which the hospital is to acquire the so-called Hopewell mill property. This will allow the construction of a new entrance, materially shorten the distance to one colony, add much to the convenience of visitors and employees, perhaps admit of a saving through the nearness of the electric express and suggest the possibility of locating employees' cottages in the future upon the newly acquired land. The trustees, who considered the problem of the Hopewell entrance and the railroad spur track three years ago, are much pleased at the prospect of seeing these improvements materialize.

Confident in each other, harmony and a spirit of kindness and humanity toward patients continue to mark the work of the entire hospital staff. No other spirit would be tolerated. As before, visits of inspection by the public have been invited, save on holidays and Sundays, which are reserved for the relatives and friends of the patients, and these visits have fostered the growth of confidence in the institution and its management.

# Extract from Superintendent's Annual Report.

During the year we had 70 cases of tuberculosis, -28 men and 42 women, with 21 deaths; 79 cases of acute enteritis, -26 men and 53 women, with 12 deaths; 16 cases of dysentery and 1 case of measles with no deaths.

Fifteen hundred and twenty-seven different patients, 794 men and 733 women, 75 per cent. of the whole number under treatment, were engaged in some form of employment; of these, 894 patients, 571 men and 323 women, 44 per cent. of the whole number under treatment, were employed upon other than ward work. The work at the Lovering Colony

for women deserves special mention. Besides indoor employments knitting, sewing, weaving, rug making, etc. - 20 patients voluntarily cultivated individual gardens. It is only fair to say that these gardens were successful, furnishing the colony with a good supply of fresh vegetables. These gardens produced 1,280 pounds of squash, 412 pounds of string beans, 633 ears of sweet corn, 932 pounds of tomatoes, 13 bushels of radishes, 400 pounds of summer cabbage and smaller amounts of miscellaneous vegetables. The heavier farm work was, as usual, done by male patients under the supervision of a farm attendant. The general colony garden, besides supplying the colony table, produced a handsome surplus for the main hospital. Of farm crops the most important were 600 bushels of potatoes and 40 bushels of pea beans. Besides the farm work they have stumped, drained and plowed about  $2\frac{1}{2}$  acres of rough land that will be ready for cultivation next spring, and have done considerable road making and grading. For several years past we have each year reclaimed an acre or more of the rough, swampy land, and we hope to continue until the whole is brought under cultivation.

During the year the three colony buildings have been connected by corridors, enabling the patients to pass from the day rooms to the dining room under cover, an improvement much appreciated, especially in stormy weather.

Our War Relief Association is continuing its commendable work. Since the United States entered the war the association has co-operated with the local branch of the Red Cross, sending its entire output to them for distribution.

The necessary work of our training school for nurses has been performed under difficulties. War conditions have rendered it very difficult, and, in fact, impossible, to fill all vacancies in our force of pupil nurses, and, in fact, at no time during the year have we had our full quota of nurses on duty. In addition, the regulations and requirements necessary to standardize all the State hospital training schools went into effect this past year. As these required the completion of the full term of general hospital affiliation to qualify for graduation, it was necessary for us to send our whole senior class to the Boston City Hospital during the year. Their absence, together with the war shortage, has rendered the proper care and observation of our patients very difficult, if not impossible, at times. We are pleased to report, however, that our nurses and attendants have acquitted themselves well, and have evidently felt that they were "doing their bit" by caring for those who could not care for themselves. The changed requirements for admission to the school has resulted, as was expected, in the reintroduction of "attendants," to which class most of the men now belong. We have not as yet held our graduation exercises, owing to the fact that nearly all of the graduating class are at present at the Boston City Hospital. These exercises will be held at as early a date as possible. Sixteen pupil nurses - 15 women and one man - have or will have completed the requirements for graduation on the expiration of their terms of affiliation. Twenty-one of our pupil nurses are in the Boston City Hospital at the present time, a total of 31 having been sent to that institution from Oct. 1, 1916, to Oct. 1, 1917. Seven postgraduate nurses were admitted during the year, of whom 3 completed the course. The number in the training school at present is as follows: seniors, 7; intermediates, 39; juniors, 19. In addition to these we now have in our employ 29 attendants.

Since the war began the following physicians, nurses and employees have entered the United States service:—

Physicians. - Dr. Thomas O'Brien and Dr. Charles E. Roderick.

Nurses. — George D. McGuire, Arthur Bradshaw, Eliza Orvis, Katherine Kirkpatrick, Ellen Stopfor Taylor and Jessie Mabel Bowes.

*Employees.* — Fred Strong, Fred Davio, James Smith, Richard Marcott, Edwin Facey, Clyde Whitman, John McCarthy, Joseph Dowd, Edgar Landry and John Spinney.

In addition to the above, the following former officers and nurses are known to be in the service of the United States or of one of our Allies: —

Dr. Raoul G. Provost, United States Army.

Dr. Francis S. Caldicott, United States Army.

Daisy Binning, R.N., Canadian Red Cross.

Mable Linscott, R.N., Harvard Unit.

Robert D. Hastings, British Hospital Unit.

Eletta Worcester, R.N., Army Nurse Corps, United States Army.

Margaret B. Angus, R.N., American Red Cross.

Arthur Foulds, British Hospital Unit.

Ruth Holland, R.N., Army Nurse Corps, United States Army.

Sadie P. McLellan, R.N., Canadian Military Unit.

Frances M. Bourne, R.N., Canadian Military Unit.

May we not properly and justly be proud of this showing by our training school?

Drs. John F. O'Brien and Abraham Myerson each served for one month as contract surgeon examining the drafted men in the camps at Ayer and Framingham.

The mental clinics, mentioned in last year's report in Taunton, Fall River and New Bedford, and also the children's clinic in Fall River and New Bedford, held in co-operation with Dr. Fernald, Superintendent, Massachusetts School for the Feeble-minded, have been maintained and continue to be successful.

# NORTHAMPTON STATE HOSPITAL.

Opened in August, 1858. Present capacity, 818; decrease for the year, 1.

Valuation of the plant, per capita of capacity, \$1,336; real estate, \$1,137; personal, \$199.

Daily average number of patients on books, 1,112; in hospital, 965; in family care, 32; on visit or escape, 115.

Number on books Oct. 1, 1917, 1,118; in hospital, 949; in family care, 29; on visit or escape, 140.

All admissions, 480.

Admissions as insane, inclusive of temporary-care cases, 477. First cases of insanity, 381.

Voluntary admissions, 25.

Admissions as inebriate, 1.

# Finances.

Expenditures from maintenance funds, \$270,234; total receipts, \$62,731; being \$41,009 from private patients, \$17,521 from reimbursing patients, \$4,201 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.15; the same less repairs and improvements, \$4.93.

Weekly per capita cost of whole service, \$1.83; ward service, \$0.64.

One person employed for every 6.44 patients; 1 nurse for every 14.06 patients.

Average monthly wage for all persons employed, \$52.67; for nurses, \$40.37; men, \$43.01; women, \$37.77.

# Extract from Trustees' Annual Report.

Reference to the superintendent's report will show that the overcrowded condition of former years not only has continued but has increased. Both the total number of patients cared for and the daily average number have been larger than ever before. To relieve the congestion somewhat the Commission on Mental Diseases transferred 113 patients during the year to Grafton State Hospital, the Gardner State Colony and the Monson State Hospital, but this has afforded only temporary relief. Year after year since 1905, when the last building for the accommodation of patients was erected, there have been transferred to institutions in the eastern part of the State more than 800 patients. This seems to us unwise and unnecessary. The institutions to which they were sent have gone on increasing in size, erecting new buildings, but not any more economically than could have been done in the western part of the State; and comparisons of cost do not show that these patients were maintained more economically than they would have been at Northampton.

The superintendent in his report has suggested several ways by which

the overcrowding may be relieved and provision made for all patients that may be committed to the hospital in the future. Whatever measures are adopted should be for the permanent relief of conditions that have for years worked an injustice not only to the patients affected by them, but to the community as well. We therefore think it inexpedient to ask for any enlargement of the institution till definite plans may be formulated by us, in conjunction with the Commission on Mental Diseases, to provide for all the insane of the four western counties, looking forward ten, fifteen or twenty years.

# Extract from the Superintendent's Annual Report.

The large number of patients admitted and cared for has necessarily caused an increase in the routine clinical work, but much of the time we have been short of assistants, one each in the male and female service.

The pathological work has increased to such an extent as to make it advisable to enlarge our staff so that one assistant may give his whole time to this line of work.

Dispensary work and dental work also have both increased so that an extension of our service is desirable. We need a pharmacist, and we could profitably employ a dentist the full time instead of one day a week, as now. The dentist reports that during the year he has treated the following cases: prophylaxis, 135, pyorrhea, 12; extracting, 450; alloy fillings, 70; cement fillings, 40; enamel fillings, 19; porcelain crowns, 3; gold crowns, 1; full upper vulcanite dentures, 10; full lower vulcanite dentures, 8; upper partial vulcanite dentures, 2; bridgework, 2; repair of vulcanite dentures, 4; lower metal plate, 1.

Our out-patient and social service department has had an active year, the sixth since its formal inception.

There were 45 cases cared for during the year under family care, 29 remaining at the end of the year. All of those who are able do some work to help pay their board, some paying for their full support, and a few earning money besides board and room, but the increased cost of main-taining them has lessened the number of families willing to accept such cases at the rate of board we are allowed to pay.

Clinics were held regularly each month at Springfield, Pittsfield and Greenfield. These have been well attended, and our experience warrants the belief in their great usefulness to the public and that the public appreciates our help. More and more cases are being referred for advice, and as the public learns of the clinics more individuals come of their own accord.

To review briefly the nature of the work: patients on parole come to report; relatives of patients in the hospital come to inquire about them; individuals come seeking advice for themselves; the various charitable associations and teachers in the public schools bring children suspected of being feeble-minded for examination; physicians refer patients to us;

judges ask examination of persons brought before them, pending a determination of the case. Thus 275 such cases were seen during the year.

Dr. Whitney has frequently visited families or individuals who cannot be brought to the clinics, and has gone in consultation when the patient could not come to us. Homes of newly received patients are visited to learn more of the patient's early history; also homes of patients who are improving, to learn whether conditions warrant dismissal of the patient on trial visit before complete recovery.

The course in our training school has been increased to three years, during one of which the nurse must serve at Bellevue Hospital, with which hospital we have formed an alliance. Three of our nurses are now there in training. The curriculum has been enlarged to include all requirements necessary for our graduates to register in our own State and in New York.

During the entire year we have been handicapped seriously because of inability to engage the proper number of nurses. At times we have had less than 50 per cent. of the needed number in service. This not only makes it difficult for us to give the individual attention to some of our patients that we should like to give, but allows an insufficient time to the nurses for their studies and class work.

A brief study of the movement of population, as appears in our annual reports for the past ten years and more, will call attention to conditions that should receive serious consideration without further delay. During the past year we have received 67 patients more than were received last year, and have cared for 89 more than a year ago, but the number cared for last year was at that time the largest in the history of the hospital. To relieve our overcrowding this year the Commission on Mental Diseases transferred 113 patients to other State institutions, but to judge from past experience the relief thus afforded will be but temporary.

Our hospital has 203 single rooms, including those occupied by nurses and attendants, 59 double rooms to accommodate 132, and dormitory space for 402, a total of 737; but for years we have cared for many more than that number, only, however, by putting extra beds in rooms and dormitories, and by making up beds in the corridors at night, — on some nights as many as 190.

It is obvious that we cannot accommodate more than we are now caring for without extensive additions to our hospital, yet it is only reasonable to expect a steady increase in the numbers to be cared for. The reasons for this increase have been discussed frequently by us before. Briefly, a part of the increase follows *pari passu* with the increase in population of our district, and part is due to the fact that advantage is taken more and more of the facilities of the hospital. The public is less apprehensive and more appreciative,

I recommend that efforts be continued to further the plan suggested in former reports of building a branch hospital, perhaps near Springfield, where patients may come for consultation and advice; where temporary care and treatment may be provided, thus possibly precluding the necessity of commitment to the hospital at Northampton; and where scientific work in relation to mental diseases and intensive study of cases may be carried on. The Legislature of 1917 passed an act authorizing the development of such a service for the "investigation of the nature, causes, treatment and results of mental diseases and defect." Such an institution would in part be an extension of our social service and out-patient work and clinics for the vicinity of its location.

Employment has always been considered one of the most important means of treatment. Accordingly, as many patients have been employed as possible during the past year. Every one who is physically able to, is urged to do some sort of work. For those who are convalescing, and for those who need special attention and supervision, three teachers are employed to direct and stimulate them.

The large number who are in good physical health help in the ward work, sweeping, making beds, dining-room work, helping other patients; in the housework of the administration building, in the sewing and mending rooms, in the kitchen, at the laundry, in the bakery, at the shops, at the barns, on the farm.

Some of the women patients have garden plots in which they may raise flowers and small vegetables for their own use.

All of the upholstering is done by patients, and all of the mattresses, tinware and brooms used in the hospital are made here.

Baskets, shoes, chairs and furniture are repaired by patients, and they help in all of the cement work.

A canning department was established in the room in the basement formerly used by the painter, fitted with pressure kettles for doing canning on a large scale, where 37 varieties were prepared, almost rivaling in variety the 57 of another make, and surpassing them in quality, in the opinion of those who did the canning and preserving.

Three teachers of industries have supervised the work of from 20 to 40 patients in the industrial room, and 172 on the wards. A list of articles made by them is as follows: crocheting and knitting, 583 pieces, — sweaters, caps, wristlets, mittens, bed socks, scarfs, firemen's shawls and slippers; 132 rugs, including woven, hooked, braided and tied; weaving, 14 pieces, — bags, table runners, bedspreads and portières; toweling woven,  $124\frac{1}{2}$  yards; towels hemmed, 2,361; 15 baskets of reed and raffia; string work, 56 pieces, — belts and key cords; 15 pieces of embroidery, — doilies, cushions, bureau scarfs; toys, 41, — flower sticks, door stops, toy monkeys, toy parrots, paper weights.

There were three exhibitions during the year of work done by the patients, — one at Oberlin, Ohio, at an exhibition of the Oberlin Art Association, from April 9 to May 7; one at the meeting of the American Medico-Psychological Association in New York City in May; and one at the Three Counties Fair, October 2, 3 and 4.

# DANVERS STATE HOSPITAL.

Opened in May, 1878. Present capacity, 1,347; increase for the year, 3.

Valuation of the plant, per capita of capacity, \$1,725; real estate, \$1,562; personal, \$163.

Daily average number of patients on books, 1,704; in hospital, 1,488; in family care, 24; on visit or escape, 192.

Number on books Oct. 1, 1917, 1,756; in hospital, 1,509; in family care, 27; on visit or escape, 220.

All admissions, 736.

Admissions as insane, inclusive of temporary-care cases, 731. First cases of insanity, 528:

Voluntary admissions, 65.

Commitments as inebriate, 1.

### Finances.

Expenditures from maintenance funds, \$444,168; total receipts, \$66,443; being \$36,705 from private patients, \$25,133 from reimbursing patients, \$4,605 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.61; the same less repairs and improvements, \$5.15.

Weekly per capita cost of whole service, \$2.05; ward service, \$0.77.

One person employed for every 5 patients; 1 nurse for every 9.50 patients.

Average monthly wage for all persons employed, \$45.31; for nurses, \$32.41; men, \$35.45; women, \$30.44.

# Extract from Trustees' Annual Report.

Seldom has there been a time when this hospital has had such a shortage of medical officers as this year. Where ordinarily eight assistant physicians have been needed, the institution has been obliged, most of the year, to carry on the medical and scientific work with a force of four assistants. Under such conditions it has been a most difficult task to meet satisfactorily the clinical needs of the hospital. Routine medical work has engaged every moment of the assistants' time. Opportunity for research or individual investigation of special problems has been prevented by the pressing demands of routine. For the first time in years the hospital

1918.]

# COMMISSION ON MENTAL DISEASES. [Jan.

has lacked the services of a skilled pathologist. More liberal compensation for assistant physicians, in line with what is offered in other fields, seems necessary if there shall be maintained the same standards of excellence in care and treatment of the insane upon which our State has had just cause to pride itself.

90

#### Extract from Superintendent's Annual Report.

The shortage of nurses and ward help during the year has been a most serious problem. Judging by the records of applications for ward positions, young men and women of the type desired in our work found superior attractions in other fields, and a much smaller number sought institutional positions than in previous years. There were times when our wards were so short of help that we had less than 1 attendant for 60 patients. Even in those wards where the most disturbed cases are cared for we have at times been obliged to carry on the service with less than half the force of attendants normally required. Outside of Massachusetts the same difficulty seemed to prevail, and in several States a schedule of salaries providing a considerable increase over former ratings was established to offset the handicaps of a labor market offering higher compensations and easier, more attractive conditions. Under these circumstances our supply of help, already inadequate, was reduced to an alarming extent. A careful study of the situation was made by the director of the Commission on Mental Diseases and the superintendents of the various institutions. It became evident that only an increase in the rate of compensations for nurses and attendants equal to that given in other States offered any possibility of a solution of the problem. A new schedule of salaries for this group was adopted, providing an increase of \$5 per month in initial rates, and \$2.50 increases at the end of three and six months' services. Some relief from the difficulty which handicapped the work of the hospital was immediately apparent. At least, those already in the service were not so tempted to leave through greater inducements for similar service in other States. For the time being there has been averted the danger of hospital care and treatment degenerating, through lack of a sufficient force of helpers, into a routine effort to feed, clothe and shelter the great number of patients we are obliged to receive.

During most of the year there has been a shortage of officers of the medical staff. At least eight assistants in addition to a pathologist are required in an institution of this size and type. With an admission rate of 800 patients, and a daily average population of nearly 1,500 patients, it is obvious that medical care, individual attention and study of special cases, and scientific investigation cannot be carried on successfully with a limited staff of officers. The position of pathologist remaining vacant during most of the year, laboratory activity has been chiefly confined to routine examination and gross anatomical work by the clinicians. With a medical staff reduced to four assistants, as has been our case for the past three months, there is a possibility that medical and mental treatment may suffer in the pressure of routine clinical duties. The demands upon the assistants' time by the admitting of patients, ward rounds and inspections, attending to correspondence, interviews with friends of patients, lectures to nurses in the training school, physical, mental and neurological examinations of newly admitted cases, and regular case noting, leave little opportunity for intensive study and attention which so many of our cases require. Undoubtedly the scarcity of trained men willing to accept hospital positions is due in part to enlistments for military service, but an equally important reason is that the salaries offered in our institutions are low as compared with inducements in other fields. The average skilled mechanic to-day, in many instances, receives greater compensation for his services than the trained and experienced physician.

Our visiting dentist, Dr. Frank H. Leslie, has been engaged one day each week during the year at the hospital. The dental needs of our patients, however, are greater than can possibly be met by a day's service weekly. Recently Miss Geneva H. Walls, a graduate of the Forsyth Dental Infirmary, has been engaged as a dental hygienist, and a systematic course of prophylactic and remedial treatment has been put into operation. It is anticipated that great benefit to our patients will result from this new departure in a field of therapy heretofore almost wholly neglected.

Occupational therapy has engaged earnest attention during the year. Miss Edith F. Beane, in charge of this department, has had the assistance of four trained teachers, who have given their time solely to re-educational methods. Pottery, weaving, metal work, basket making, drawing, rug making, embroidery, etc., have furnished opportunities for physical and mental employment and recreation that have contributed greatly to lighten the burden of our patients' afflictions, to restore their interest, and to awaken hope that their usefulness in the world had not wholly passed away on the day of their commitment to the hospital. Some of the work turned out in the arts and crafts department compares favorably with handicraft of most skilled workmanship. The influence of various occupations of this kind, with its compelling appeal to interest, is found to be of excellent therapeutic advantage also in all stages of mental illness. It is most cheering to behold the heartiness shown in learning weaving. basket making, pottery making and other arts by patients whose hospital life would otherwise be a succession of days of wearving tedium and disheartenment. Places for special work of this kind for the demented class are being prepared on the fourth floors of the B and I sections.

Employment of various kinds is enjoined on all who are capable of rendering it. A large number of male patients have assisted in the labor of the farm and gardens. In this, as in other occupations for the patients, they were made to feel that anything they did was voluntary on their part, and intended for their good. Healthy physical exercises of this nature, promoting the improvement of patients, is a proper and legitimate part of hospital work. Beside the physical and mental advantages of such occupation the moral effect is equally important, especially with the indigent cases, who are prone to feel that the State owes them a living. As a means of retaining self-respect and manly independence there is nothing that can compare with the consciousness of accomplishing something useful for one's self and others.

The work of the social service department deserves special mention. With the medical staff reduced in number, a great deal of extra work fell to the social worker and her assistant. The very important duties of interviewing friends and relatives, obtaining histories, and investigating home conditions and complaints relative to patients, were largely delegated to this department. After-care work, connection of needy persons with relief agencies, and the placing and boarding of patients in private families, were carried on as usual.

Out-patient clinics have been held monthly in Lawrence, Haverhill, Malden, Gloucester, Lynn and Salem. Clinics were also held at Newburyport. Interest in these clinics continues, and patients discharged on visits seldom fail to respond to invitations to attend. The clinics were conceived in the spirit of helpfulness to those discharged from the hospital, and concrete evidences of these motives have resulted in a clearer conception of the aims and purposes of the hospital and a ready co-operation in all the communities visited.

# WESTBOROUGH STATE HOSPITAL.

Opened in December, 1886. Present capacity, 1,161.

Valuation of the plant, per capita of capacity, \$895; real estate, \$746; personal, \$149.

Daily average number of patients on books, 1,464; in hospital, 1,240; in family care, 47; on visit or escape, 177.

Number on books Oct. 1, 1917, 1,576; in hospital, 1,247; in family care, 44; on visit or escape, 285.

All admissions, 648.

Admissions as insane, inclusive of temporary-care cases, 533. First cases of insanity, 325.

Voluntary admissions, 118.

Commitments as inebriate, 103.

### Finances.

Expenditures from maintenance funds, \$414,906; total receipts, \$74,405; being \$49,828 from private patients, \$22,269 from reimbursing patients, \$2,308 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$6.18; the same less repairs and improvements, \$6.03.

Weekly per capita cost of whole service, \$2.48; ward service, \$1.09.

One person employed for every 3.65 patients; 1 nurse for every 6.29 patients.

Average monthly wage for all persons employed, \$40.59; for nurses, \$30.77; men, \$31.53; women, \$30.12.

# Extract from Trustees' Annual Report.

In looking back over the year one very pleasant day is prominent, the 7th of December, 1916, which marked the thirtieth anniversary of the opening of the hospital. Our associates came from other institutions; greetings were exchanged; and visitors and our own officers presented valuable papers describing their investigations and their conclusions on subjects allied to disordered mental functions. We are grateful to our visitors for their kind efforts on this occasion, and to our own staff also, especially Dr. Spalding and Dr. Fuller.

The trustees declared that, in some way, the patients and employees should have an opportunity to express their patriotic feelings and interest in our soldiers. In making this wish effective, two of the trustees have been especially interested and active, and have collected money amounting to \$346. Dr. Spalding also received subscriptions from former trustees and friends of the hospital. All money has been used in the purchase of yarn and materials which have been made into garments and supplies and delivered to the Red Cross society. It is a pleasure to every one that so much has been accomplished for the needs of our defenders, and also that the handiwork has shown such marked excellence.

Two of our medical staff, Drs. James A. Gould and Ralph M. Chambers, enlisted in the Medical Officers Reserve Corps, and were given leave of absence until their military service shall end. Their work here was very satisfactory, and we feel sure that sick and wounded soldier's will greatly benefit by their skill and helpfulness.

# Extract from Superintendent's Annual Report.

The great increase in temporary-care commitments is noteworthy, there having been 60 temporary-care admissions during the past year. It would seem that this method of admission was being used in some communities to excess, and unnecessarily. Chronic patients who could well be cared for at home until the permanent commitment papers have been made out are frequently sent as temporary-care, the commitment papers to follow a few days later. These commitments not being by order of the court could be refused by the superintendent if he felt that the conditions justified such action on his part, but while he might feel that this urgent or emergency temporary-care commitment was not necessary in a given case, it would be a hardship, and detriment to the patients' welfare, to return them to their home only to be brought to the hospital again the next day.

There has been an increase in the commitments for observation, some courts apparently committing many of their cases for periods of observation before making a permanent commitment. Both of these methods of commitment, temporary-care and for observation, entail a considerable increase in clerical work and detail lest the patient be detained longer than the period of commitment established by law or by the court.

The labor situation during the past year has been as difficult for the hospitals as for the concerns outside. The male wards employing the largest number of men of any one group offer perhaps the best opportunity for study. This department has been allowed during the year an average of 94.4 employees. On Dec. 1, 1916, there were employed in this department, the male ward service, 91 individuals; 30 of that number remained in service the entire year. There has been a daily average on the pay roll of 89, leaving 59 positions to be filled with transient help. To do this required the employment of 446 new men and 14 transferred to this department from others. That is nearly 9 men for each of the 59 positions, the average period of employment for each man being about five and six weeks.

The course in the training school has been adjusted so that it corresponds with the plans laid down by the Commission on Mental Diseases, and we have an affiliation with the Massachusetts Homcopathic Hospital of Boston. We graduated during the year 30 women nurses and 5 men.

The industrial room for women, located in what was formerly Talbot kitchen, has worked out successfully. The small rooms adjacent to the large room, which were pantries and storerooms, give opportunity for some classification of patients and work in this department; that is, one small room is given to workers in pottery, another to workers on drawn rugs, while another is used as an exhibition room. The output from the industrial department this year has been less than the preceding year, shortage of labor making it necessary to close the men's rooms intermittently, and in the women's industrial room most of our energy has been devoted to Red Cross work.

As a result of appeals to friends and in the Press there has been contributed for the purchase of material for Red Cross work \$134.33. In addition, the Metropolitan Red Cross Chapter sent us 100 pounds of wool for knitting. There have been made for the Red Cross during the past year the following: 26 pairs pajamas; 12 convalescent robes; 4,478 handkerchiefs; 886 knitted face cloths; 144 knitted scarfs; 88 knitted bandages; 34 pairs of socks; 16 knitted sweaters; 15 pairs of wristers; 10 pillows.

# 1918.] PUBLIC DOCUMENT — No. 117.

Medical work has continued to develop along the usual lines. The clinical study of cases on the wards, with their consideration at a staff conference for diagnosis and later for release, has been followed as in previous years.

Dr. Ernest P. Brigham of Westborough has continued to care for the dentistry, and reports the following work done: amalgam fillings, 90; cement fillings, 60; synthetic porcelain, 19; teeth extracted, 365; teeth treated, 29; teeth cleaned, 65; new sets of teeth made; sets of teeth repaired, 22; new bridge work made, 5; new crowns made, 3; crown and bridge repairs, 4.

The increasing cost and difficulty in obtaining food stimulated us to increased efforts to produce more in the way of vegetables. We planted fully as much as we could care for, and if we are to increase our productions next year, which is highly desirable, we must make more use of machinery. We should try a tractor for farm work, which should make a considerable saving in man power. We were very late in plowing and planting last year, much to the detriment of the crops, particularly as there was an early frost. Women patients worked in the vegetable gardens with much benefit to themselves and profit to the hospital.

The farm account shows a profit of \$21,579. The largest item of expense was for hay and grain (\$18,486). The next largest was the pay roll. There was some decrease in milk production, but the value was increased, there being produced 258,564 quarts, valued at \$20,685. We made every effort to increase the vegetables for canning and winter use. As a result we put up in cans, glass jars, and as pickles, 3,600 gallons of vegetables in our freezing room of the cold-storage plant.

In the mending and sewing rooms of the main buildings nearly 7,000 articles were repaired and nearly 17,500 articles and garments manufactured. In the industrial rooms of the Warren Colony for men over 8,500 garments and articles were made or repaired in the tailor shop, and 119 chairs caned or upholstered.

In the shoe shop at Richmond Colony over 1,700 pairs of shoes were repaired.

# BOSTON STATE HOSPITAL.

Opened in December, 1839. Present capacity, 1,554; increase for the year, 150.

Valuation of the plant, per capita of capacity, \$1,987; real estate, \$1,888; personal, \$99.

Daily average number of patients on books, 1,784; in hospital, 1,611; in family care, 8; on visit or escape, 165.

Number on books Oct. 1, 1917, 1,795; in hospital, 1,560: in family care, 11; on visit or escape, 224.

All admissions, 2,272.

Admissions as insane, inclusive of temporary-care cases, 2,259. First cases of insanity, 1,858.

Voluntary admissions, 408.

Commitments as inebriate, none.

# Finances.

Expenditures from maintenance funds, \$578,794; total receipts, \$51,699; being \$24,848 from private patients, \$22,931 from reimbursing patients, \$3,920 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$6.87; the same less repairs and improvements, \$6.72.

Weekly per capita cost of whole service, \$2.78; ward service, \$1.18.

One person employed for every 3.81 patients; 1 nurse for every 7.16 patients.

Average monthly wage for all persons employed, \$46.28; for nurses, \$37.02; men, \$36; women, \$37.66.

### Extract from Trustees' Annual Report.

#### Changes in the Board.

The Board has lost through death two of its most valued members, the Hon. Melvin S. Nash, who died Dec. 29, 1916, and Mr. Lehman Pickert, whose death occurred Nov. 8, 1917.

#### Death of the Superintendent.

In the death of Dr. Henry P. Frost, which occurred at the Massachusetts General Hospital on May 23, after a prolonged illness, our hospital sustained a most serious loss. Dr. Frost was appointed superintendent in 1910, having previously been the assistant superintendent of the Buffalo State Hospital in New York. In his seven years of service Dr. Frost has served the hospital most generously, and to his faithful efforts is due the rapid progress that has been made in the development and organization of the institution.

Several times during each year we are obliged to ask for the transfer to other institutions of a certain number of patients in order to make room for the admission of new ones. Even by this means we just limit the use of the hospital to those persons who have had at least ten years of residence in Boston. Such transfers and such limitations are a distinct hardship to the friends of patients who are not permitted to reside in this institution. It means very much less frequent visits because of the time and expense involved in traveling to more distant hospitals. There

# 1918.] PUBLIC DOCUMENT — No. 117.

is a regular increase in the number of beds that must be provided each year in the State, and the need of this additional accommodation is greatest at this center of population. If such added accommodations are to be made at this hospital the greatest need is for another infirmary building to contain at least 300 beds, and we have therefore included this in our recommendations.

#### Social Service.

The need and value of an extended social service in a metropolitan hospital has not yet been sufficiently recognized. The demand is acute in connection with the observation and out-patient branches of the psychopathic department, in which a knowledge of the home conditions and suitable oversight and advice may facilitate the treatment and often obviate the commitment of the patient. It is likewise of great value in connection with the main hospital, from which patients may more readily be returned to their families if there is a means of observing them and of rendering helpful assistance in their home care. The hospital cannot render a greater service than to help those threatened with or suffering from mental disease to live outside of the institution, and for this purpose we need to have at our disposal a larger number of persons whose duties carry them into the homes of patients. This is especially true in dealing with cases occurring in a large city.

#### Administration.

The trustees have appointed as superintendent Dr. James V. May, now superintendent of the Grafton State Hospital. Dr. May will begin his duties on December 1.

Dr. Elisha H. Cohoon resigned his position as administrator of the psychopathic department April 1, and Dr. Arthur P. Noyes, at that time senior assistant physician in the same department, was designated acting administrator.

#### Extract from Superintendent's Annual Report.

This report, other than the statistics, deals with the main hospital only.

The new custodial building for 150 women was completed and opened October 16. The disturbed women from the Cowles building were transferred to this new building, and the disturbed men, formerly in the north wing of the Fisher building, were transferred to the Cowles building. The alterations were immediately started on the Fisher north wing. The ground was broken for the new nurses' home at the West Group on September 13.

There is still a great overcrowding in the infirmary. The hospital has a much larger percentage of aged and feeble than those farther from the city. This can only be accounted for by the fact that on account of the

limited capacity here a large number of able-bodied patients residing in Boston are committed to hospitals at a distance, while those unable to take the longer trips are committed directly here; also, for many years, a large number of patients have been transferred from this institution to the outlying hospitals. These transfers have included the able-bodied always, while the more feeble have remained.

In addition to more room for infirmary patients there is a great need for a nurses' home at the East Group. New central kitchens are badly needed at each group. There are now twenty-six different dining rooms for patients. This means a great expense in maintenance as well as an enormous waste. Therefore in connection with the kitchens above mentioned there should be a congregate dining room for each group. This would also mean a decided increase of capacity, as the present dining rooms could be used as dormitories for patients.

The most serious difficulty the administration has had to face this year was the great shortage of nurses and attendants, but in spite of this, with the increased scale of wages we were able to retain the services of many of the older and better trained, and to them we owe the fact that we had no accidents resulting fatally.

#### Training School for Nurses.

The graduating exercises for the class of 1917 were held in the evening of October 22. This date was chosen as it marked the completion of sixteen years of faithful and efficient service of Miss Robertson, the superintendent of nurses. The occasion was made a special, patriotic one, the hall being decorated with large flags of the Allies, kindly loaned by William Filene's Sons Company and Jordan Marsh Company. The program was particularly interesting. Miss Mary Beard, director of the District Nursing Association, and president of the National Organization of Public Health Nursing, addressed the graduating class.

#### Recreation and Employment of Patients.

In addition to the regular dances there have been moving pictures in the chapel at each group, and in the infirmary wards, where patients are unable to walk to the chapel. There were also concerts and other musical entertainments, so that we had something in this line for the patients every week. The hospital is greatly in need of more victrolas, more pianos and a good organ in each chapel.

In the early part of the year we started to manufacture shoes, but on account of the high cost of material this has been discontinued. However, a large amount of shoe repairing has been done. Along other lines the industries have progressed, the usual amount of work having been done on the wards and in the different industrial rooms, and during the summer a much larger number of patients than usual were employed out of doors. This was on account of the more extensive gardening.

1918.]

### Farms and Grounds.

The season has been unusually profitable in the production of vegetables. More land than usual was tilled and many more patients employed on the farm. The hospital will have enough vegetables grown on hospital land to last until early spring. The potato crop was considerably over 4,000 bushels. About 50 tons of cabbages and more than that amount of squash was raised, in addition to proportionate quantities of other vegetables. A little over 100 bushels of rye was raised, which is now being ground into flour. The large field of buckwheat was ruined by the heavy rains. The profit on the hogs was unusually large this year, the yield being somewhat over \$10,000. There was very little garbage from the institution, but a large field of alfalfa cut green and fed the pigs offset this.

# Extract from Director's Annual Report (Psychopathic Department).

The internal economy of the institution has continued to the satisfaction of all under an arrangement by which there is an administrator.

One main advance of the year has been the consolidation of the executive service upon a salary basis, which promises, even in these difficult times, to keep a certain continuity of service. The chief problems confronting the hospital in future are those of maintaining an equally highstandard continuous medical service, and of developing a high-standard continuous out-patient service. The national reputation of the hospital is such that a continuous stream of applications for subordinate positions in the medical service for limited periods is assured, but so great is the demand for these men in other institutions of this State and elsewhere that, on the present salary level, no continuity of medical policy can be hoped for. That such has been maintained so far is due to the extraordinary zeal of certain workers. Were it not for the fact that officers from the Commission on Mental Diseases, notably Dr. Solomon and Dr. Thom, have been available to leap into the breach caused by vacation and illness of regular officers, the hospital would hardly have made so good a medical record.

Recently, also, the routine of the hospital has been helped by the delegation from the Surgeon-General of a number of excellent surgeons who found their best means of improvement in psychiatry to be participation in our routine work.

As noted in previous reports, the most striking feature of the Psychopathic Hospital work is its community relations. Hardly any branch of public or private work in charities and corrections but has threads running to the Psychopathic Hospital.

With respect to the war and its effect on the hospital, aside from difficulties in manning the medical and nursing services, the hospital will doubtless become an important diagnostic and therapeutic agent, since English and French experience, to say nothing of the other belligerents, has shown that practically all the institutions capable of elaborate diagnostic and therapeutic work have been diverted more or less to war work. For example, the new Maudsely Mental Hospital, with Dr. F. W. Mott as director, and built upon lines somewhat resembling those of our own hospital, has been devoted to this work, and reports from the Salpétrière and La Pitié in Paris, especially the work of Babinski in La Pitié, indicate how well-equipped institutions of the interior have been used in England and France to help in this work. Under exactly what conditions the Psychopathic Hospital may be used is a matter for consideration.

Although five years of Psychopathic Hospital work were complete in June, 1917, it cannot be said that the institution's functions are thoroughly understood either at home or abroad. To be sure, the uniqueness of the institution and its national reputation have resulted in a great deal of correspondence and numerous visitors, administrative, social and medical. Commissions from distant States are sent several times each year to investigate our plan and operation. Many social bureau heads resort to the hospital for advice about the expansion of mental hygiene work in different parts of the country. The list of medical officers shows men derived from many of the most remote States of the Union. Professor Elliot-Smith, dean of University of Manchester, England, has gone so far in his book on "Shell-shock" as to instance the Boston Psychopathic Hospital as the type of institution which British psychiatry strongly needs.

Despite this extensive reputation, the functions of the hospital are not at all thoroughly grasped. In the first place, the institution is not in any sense a receiving ward for committed cases, and is not, as so many visiting hospital superintendents are found to believe, an elaborate reception hospital for a State institution of recognized type.

In point of fact, the Boston State Hospital, of which the Psychopathic Hospital is a department, has its own receiving ward properly built and equipped, and receives metropolitan district patients on direct commitment from the probate court. The Psychopathic Hospital's intake of patients, legally speaking, depends on statutes either not found or not suitably constituted in other States of the Union, namely, upon the temporary-care act and the liberal legal arrangements for voluntary patients. It is not too much to say that the Psychopathic Hospital could not do its work were it not for the liberal construction of the temporarycare act and provisions for the reception, not only of paying but of indigent voluntary patients. Unless, therefore, a State contemplating the Psychopathic Hospital type of progress is prepared to place on its books an act like our temporary-care act, and to pay for the expenses of the indigent voluntary patients, such a State is not prepared for the Psychopathic Hospital at all.

The management of the Psychopathic Hospital, accordingly, resembles

# 1918.] PUBLIC DOCUMENT — No. 117.

101

far more the management of a great public or endowed general hospital than it does the management of a State institution for the insane. Dealing, as we calculate, with something like 10,000 different personalities during a year, namely, with between 3,000 and 4,000 patients, and numbers of friends and officials in addition thereto, we conceive that hardly anywhere else exists so intensive and differentiated a community relation as that of the Psychopathic Hospital, with its wards, out-patient department and research laboratories. In fact, officers seeking administrative experience can hardly get so quickly in any other institution a fair sample of most of the problems of human contact in the administrative relation with officials of courts, institutions and social bureaus, friends and relatives of all types and degrees of literacy, and with the intricately constructed neurotic and psychopathic patients themselves. An administrative officer who has successfully overcome the administrative difficulties of the Psychopathic Hospital ought to be competent to meet almost any institutional administrative complications.

# GRAFTON STATE HOSPITAL.

Opened in October, 1877; present capacity, 1,749; increase for the year, 4.

'Valuation of the plant, per capita of capacity, \$1,210; real estate, \$1,097; personal, \$113.

Daily average number of patients on books, 1,878; in hospital, 1,812; in family care, 23; on visit or escape, 43.

Number on books Oct. 1, 1917, 1,988; in hospital, 1,920; in family care, 18; on visit or escape, 50.

All admissions, 79.

Admissions as insane, inclusive of temporary-care cases, 79. Received by transfer, 395.

First cases of insanity, 36.

Voluntary admissions, 7.

Commitments as inebriate, none.

# Finances.

Expenditures from maintenance funds, \$524,888; total receipts, \$14,652; being \$2,085 from private patients, \$10,778 from reimbursing patients, \$1,789 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.38; the same less repairs and improvements, \$5.20.

Weekly per capita cost of whole service, \$1.76; ward service, \$0.60.

One person employed for every 4.91 patients; 1 nurse for every 11.14 patients.

Average monthly wage for all persons employed, \$38.06; for nurses, \$29.68; men, \$31.31; women, \$28.31.

# Extract from Trustees' Annual Report.

It affords us considerable pleasure to report that all of the ten buildings which were unoccupied at the Grafton Department when this Board assumed charge of the Institution are now fully occupied and used.

We wish again to emphasize the necessity of an increase in the wage schedule. It has been found impossible to obtain a sufficient number of employees to properly care for the patients in the hospital at the wages now paid. We are also of the opinion that whatever schedule is adopted should be uniformly used in all hospitals for the insane. At the present time employees in one hospital take advantage of the better pay offered at some other institution, a condition of affairs which should not be tolerated and which is detrimental to the best interests of the Commonwealth.

# Extract from Superintendent's Annual Report.

There has been a large number of changes in the personnel of the nurses and attendants employed in the hospital during the year. There were 349 persons employed in the institution on Nov. 30, 1916, and 390 on Nov. 30, 1917. Nine hundred and twenty-six entered the service during the year. There were 472 resignations and 413 discharges. The rotation of the employees for the year was 3.16, representing a percentage of 1,225 persons having occupied 404 positions. The usual difficulty has been encountered during the year in obtaining satisfactory employees for the hospital. This is due, to a certain extent, to the more or less unpleasant nature of the work itself, but primarily to the inadequate wages paid. It has been especially difficult to maintain a sufficient force of employees at the Grafton Department on account of its remoteness from the city. The necessity of an increased wage schedule is greater than ever before. It is equally important that all the hospitals should operate under a uniform schedule, employees frequently going from one hospital to another to take advantage of a higher rate of wages. A new schedule would, of course, be useless unless the appropriations as made by the Legislature are sufficiently large to cover the needs of the institution. For this reason it might be desirable to make a uniform wage schedule statutory.

A fairly well-equipped operating room was installed during the year in the Pines B building at Grafton, and a sterilizing equipment has been added to the operating room at Worcester. Attention is called to the necessity of obtaining additional appropriations for the purpose of installing hydrotherapeutic equipments at both the Grafton and Worcester Departments, as well as for the installation of continuous baths. The pathological work of the hospital has been done by Dr. D. A. Thom, assistant pathologist to the Commission on Mental Diseases. Under his direction special treatments have been given for neurosyphilis, with special attention to general paresis. To facilitate this work the Commission has arranged to have such cases committed directly to the Worcester Department. Dr. Thom resigned during the month of August to enter the Medical Officers' Reserve Corps of the United States Army. This work will be continued by Dr. Hiram L. Horsman, the first assistant at the Worcester Department, and Dr. Ada F. Harris. The pathological work will be done by Dr. Myrtelle M. Canavan, assistant pathologist to the Commission on Mental Diseases.

Dental rooms have been opened at both the Grafton and the Worcester Departments, and dentists are now making regular weekly visits at both places.

An intensive study of epileptic psychoses has been made at the Grafton Department during the summer. This will be made the subject of a special report at a later date.

The industrial and social service work of the institution have been earried on as usual. The industrial departments were removed from the wards at Worcester and installed in the building formerly used as a carpenter shop. All of the industries formerly housed in the Elms D building at Grafton were removed to the basement of the Elms A building, and industrial work has been carried on there on a much larger scale than has been possible heretofore.

It is obvious at this time that the entire facilities of the hospital cannot be adequately utilized by the transfer of patients from other institutions. The present capacity of the hospital is represented by a minimum of 2,035 beds. The average daily population for the last statistical year was 1,812.50. Notwithstanding the fact that there were 395 patients transferred from other institutions, the wards have not been filled at any one time during the year. The number of deaths and discharges in an institution of this size is so great that the vacancies cannot be filled by transfers from other hospitals. I would therefore suggest that arrangements be made to send more commitments to Grafton from either the Worcester or Boston districts. Owing to the remoteness of the hospital from the metropolitan center, it would seem more desirable to have cases committed from Worcester. With the remodeling of the heating plant at the Worcester Department and the completion of new stairways, the Summer Street building will be an ideal place for the reception and distribution of such patients as may be committed to the custody of this institution from the Worcester district under the direction of the Commission on Mental Diseases.

# COMMISSION ON MENTAL DISEASES.

#### Improvements during the Year.

Grafton Department. - All of the buildings at Grafton have been occupied and are now in permanent use. The Oaks Service building was opened on May 2, 1917; the Elms B building on Feb. 12, 1917; and the Elms Service building on Feb. 14, 1917. The grading and road building in front of the administration building has been completed. Grading and road building has been continued at the Oaks Group, and the service road to the Elms Group will be finished soon. The steam line connecting the Elms Group with the main powerhouse has been finished and is now in operation. The two boilers formerly located at the Elms Group have been removed to the main boiler house, and the concrete chimney under process of construction is now in use. The room in the laundry and power house building formerly used as a carpenter shop has been remodeled and made into an excellent bakery. The bread is now all baked at Grafton instead of being delivered daily from the Worcester Department, as was done Additional room has been provided at the laundry of the formerly. Grafton Department, and new machinery is being installed at the present time. The refrigerator at the Willows Service building was remodeled during the year and new insulation installed. The large stock of lumber which was formerly stored in the basement of the building at Summer Street was all removed during the year to the new carpenter shop at Grafton. The work on the Willows Farmhouse is rapidly nearing completion. It will be finished during the coming winter.

The training school was provided with a lecture room in the Pines B building during the year.

The storehouse at Grafton has been connected with the sewerage system. Contracts have been awarded for the installing of a refrigerating plant at the storehouse in Grafton, which will furnish facilities for taking care of meat, butter, eggs, etc., at that place. This will do away with the necessity of hauling such supplies from Worcester. A mending room has been installed in the Pines B building, and the room formerly used for that purpose at the laundry building is now used as a sorting room. After the removal of the boilers from the Elms power plant the chimney at that place was taken down by a Worcester firm. The bricks from this chimney, together with other materials on hand, were used in the erection of a considerable addition to the laundry building at Grafton. This will be used as a receiving room, and will ultimately furnish additional space for washing machines.

The industrial department at the Oaks Group, formerly housed in the farmhouse, has been removed to the lower floor of the Oaks A building, previously used as a kitchen.

The women's infirmary ward has been removed from the Pines C building to the Pines A building.

# MEDFIELD STATE HOSPITAL.

Opened in May, 1896; present capacity, 1,542.

Valuation of the plant, per capita of capacity, \$1,137; real estate, \$1,011; personal, \$126.

Daily average number of patients on books, 1,667; in hospital, 1,617; in family care, 25; on visit or escape, 25.

Number on books Oct. 1, 1917, 1,655; in hospital, 1,611; in family care, 22; on visit or escape, 22.

All admissions, 49.

Admissions as insane, inclusive of temporary-care cases, 49. Received by transfer, 86.

First cases of insanity, 17.

Voluntary admission, 3.

Commitments as inebriate, none.

### Finances.

Expenditures from maintenance funds, \$470,454; total receipts, \$15,668; being \$846 from private patients, \$12,388 from reimbursing patients, \$2,434 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.49; the same less repairs and improvements, \$5.36.

Weekly per capita cost of whole service, \$2.04; ward service, \$0.94.

One person employed for every 4.33 patients; 1 nurse for every 7.89 patients.

Average monthly wage for all persons employed, \$38.94; for nurses, \$32.77; men, \$36.20; women, \$30.10.

# Extract from Trustees' Annual Report.

The general health of the patients and employees has been, on the whole, good. An epidemic of grippe early in the year and another of dysentery in the late summer have taken toll of a comparatively large quota of patients. The average number of patients and an increased number of employees have required surgical operations. There have been no deaths following abdominal operations, and the infirmary has emphatically justified its institution. Altogether, 42 autopsies have been performed at the hospital.

During the year a root cellar, built by patient labor, has been added to our plant.

105

69

1918.]

The buildings generally are in need of many repairs, but in line with the policy of war economy only such as are imperatively demanded are having attention.

The sewerage improvements authorized by the Legislature early this year have not yet been undertaken. The matter seems to require further consultation between the Commission on Mental Diseases, State Department of Health and the engineers who are to have supervision of the work.

The reserve supplies on hand in the hospital are low, approximately as of last year; yet it can hardly be said that there exists a serious shortage in respect to any immediately required articles. The policy of retrenchment is and has been vigorously enforced. In many departments reorganization has effected increased efficiency and measurable economy; others are contemplated.

What may be expected in a medical line as an accompaniment or result of the present war cannot be foretold. Owing to the location of the Medfield State Hospital and its equipment it is possible that it may be selected for war work of some kind. We, the trustees, stand ready to do what we can should the services of this hospital be required for any emergencies or particular work.

### Extract from Superintendent's Annual Report.

Heretofore the medical staff, in addition to the superintendent, consisted of five members. Considering the number of patients, the high order of medical work demanded, and the fact that arrangements for increasing the number of admissions had been made, this number of physicians was obviously too small. Permission was obtained from the Legislature to employ two medical internes at \$600 per year. As this salary was too low to entice any physician in any capacity it was voted to employ one physician at a higher rate instead. War conditions have prevented the securing of a suitable physician for this vacancy.

The medical routine calls for daily staff meetings at which there is discussion of all new admissions and of cases up for discharge. Routine Wassermann examinations are made on the bloods of all admitted cases and on the spinal fluids where indicated.

Beginning in April the patients and employees in the hospital were vaccinated with typhoid vaccine, and subsequent to that time all new patients and new employees were vaccinated. It is satisfying to know that not a case of typhoid fever developed during the whole year.

Intensive treatment of paresis was given to 14 patients. In all, 196 doses of diarsenol were administered. Of these 14 patients so treated, 8 improved physically and 1 made an apparent mental and physical recovery.

Our infirmary building continues to be of great service to both patients and employees. There were performed by our consulting staff of surgeons 14 major and numerous minor surgical operations. The results were most excellent. This has been the first year in the hospital's history of the employment of full-time services of a dentist. The following account of the work done shows very conclusively the necessity for a full-time dentist and the wisdom of the Board of Trustees in providing for one. Dental work in State hospitals has long been neglected. Our dentist's work for the past year has greatly improved the comfort and general health of the patients. The resignation of Dr. Thomas to enter the United States service has been a great loss to the hospital.

The obtaining of a sufficient number of suitable employees has been somewhat of a problem during the past summer and fall. This has been especially so in the domestic and farm departments. At times the situation was very acute. Substantial raises of wages for employees in these departments to some extent relieved the condition. Wherever possible, patient help was substituted. The call to the United States service resulted in the hospital losing 30 men. Most of these enlisted, and it is interesting to know that this number was made up largely from our best employees. The present industrial situation, together with the call of the young men to the service, probably will make the help problem in the various State hospitals more serious this coming year than ever before, unless definite State-wide measures are taken to meet these special and unusual conditions.

On the whole, the operations of the farm were attended with fair success. As a result of land purchased the year before, 20 additional acres came under tillage.

The apple crop was practically a failure and the corn crop was not up to the average. The hay crop was good, and there was also an average crop of roots. With the exception of tomatoes there was an excellent supply of green vegetables. A canning outfit was obtained and a considerable amount of apples and tomatoes was canned. An extension of the canning industry is planned for next year.

Our milk supply has been adequate despite the unfortunate loss of five of our good cows on one day by heat stroke.

This year the employment of patients in the farm and garden work was encouraged, with excellent results both to the patients and farm. Berries and small fruits have not been grown. An acre and a half was set out with strawberries last spring, and it is my intention to increase the culture of this form of garden product.

# GARDNER STATE COLONY.

Opened in October, 1902. Present capacity, 732; increase for the year, 10.

Valuation of the plant, per capita of capacity, \$938; real estate, \$770; personal, \$168.

Daily average number of patients on books, 827; in hospital, 775; in family care, 44; on visit or escape, 8.

Number on books October, 1917, 853; in hospital, 797; in family care, 35; on visit or escape, 21.

Received by transfer, 85.

#### Finances.

Expenditures from maintenance funds, \$215,896; total receipts, \$4,608; being \$3,517 from reimbursing patients, \$1,091 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.02; the same less repairs and improvements, \$4.65.

Weekly per capita cost of whole service, \$1.83; ward service, \$0.59.

One person employed for every 5.61 patients; 1 nurse for every 13.48 patients.

Average monthly wage for all persons employed, \$47.11; for nurses, \$36.58; men, \$42.15; women, \$28.92.

# Extract from Trustees' Annual Report.

Within recent years two farmhouses have been purchased and altered for the accommodation of patients, but, apart from a small building for the treatment of disturbed cases, no new construction for patients has been authorized by the Legislature. The colony could easily assimilate a further increase in patients should additional buildings be provided. It owns a large tract of unused land, some 450 acres, which is separated, and in effect cut off, from the rest of the property by the embankment of the Fitchburg Railroad. The only present means of access thereto is through an opening under railroad tracks, too narrow and too low to permit the passage of vehicles. This area is now a great pasture, and considerable herds of cattle and sheep could be supported thereon if there were buildings to house the patients to care for them. This occupation is especially suited to many of our patients, and would, at comparatively small expense, increase our meat supply as well as wool for clothing. The railroad authorities estimate the expense of the construction of a suitable underpass at \$14,000, and we recommend an appropriation for that purpose. As the matter stands, this tract is practically unusable. Even the abundant firewood thereon is hard to transport to the colony buildings.

We again present the crying need for a chapel with recreation hall. Religious services, as well as entertainments for patients and employees, are greatly handicapped by our lack not only of a suitable hall, but of any hall at all.

## Extract from Superintendent's Annual Report.

#### Industries.

The numerous industries in operation last year have been continued, and in addition we have made all of our underwear on a hand-power knitting machine, and woven all blankets on a hand loom.

We have erected and are now equipping a building to be used as a pottery. In this we expect to make all of the crockery which we heretofore purchased. This will be carried on as a practical industry, and not so much a pottery in which artistic pottery is the aim. This is a continuation of our policy of making our industries, so far as possible, practical, of benefit to the institution and the patients themselves.

The lower floor of the women's industrial building has been equipped as an exhibit room, in which samples of all articles made are on exhibition for patients and visitors. A room of this sort does much to encourage both patients and their relatives.

Co-operating in the movement for food conservation we have done far more canning and preserving at each of our departments than heretofore. Tables at the end of this report will show in some detail what industries are carried on and what the production has been. This, or any table, will not show the benefit to the patients while thus employed, but the benefit is known to be very great.

Our experience has been that the more practical the industry the more the interest of the patients, and the greater the return to the Commonwealth and the patient. This year, of the total number of patients at the colony, 94 per cent. have been employed regularly; 3.8 per cent. have been incapacitated, unable to work; 2 per cent. have been idle. Compared with the previous year (1916) there were 2 per cent. fewer employed; 2 per cent. more unable to work because of illness or incapacitated. This, perhaps, is to be expected, as our institution, receiving only by transfer, becomes older, and accumulates a larger number of infirm patients.

Only extreme diligence, care and good judgment, both on the part of the physicians and employees, have prevented all but a few minor accidents, but when it is remembered that, especially in the outdoor industries, many of our patients are occupied in industries requiring the use of tools of various kinds, it is perhaps to be wondered at that we have not had more, and it may be expected, as time goes on, that now and then an accident will occur in spite of all precautions. When the great benefit to the patients is considered we are, I believe, justified in continuing our industrial pursuits just as we have carried them on in the past.

[Jan.

#### Recreation and Diversion.

While occupation is the watchword at this colony, recreation and diversion have also occupied a prominent part. A near-by grove has been fitted up as a picnic and recreation ground. Here has been erected a dancing pavilion, equipped with a piano and roller skates. Swings, hammocks, etc., have been placed about. To this grove the patients go on pleasant days, especially on Saturday afternoon and Sunday, where they engage in various pastimes, and where dinner and supper is served.

During the colder months, when out-of-door recreation is not possible, dances are held at intervals. Moving-picture entertainments have been held on Sunday evenings, together with the following entertainments: The Dietrics, December 6, Sunday afternoon or evening song service with stereopticon slides; Losef Quartette, January 15; Swanee River Quartette, February 22; the Lotus Quartette, March 23; Fred Eldred, magician, April 19; Dramatic Club, June 1; Lotus Quartette, September 20; Dramatic Club, November 29. Letters sent to relatives before Christmas resulted in their sending many presents. Those who are not remembered by their relatives receive a present from us on the tree, so that every patient receives a present. There is a Christmas tree in every ward, with a large illuminated tree in center of yard.

Employees' socials, entertainments and dances have been held at regular intervals, which socials are arranged by committees appointed by themselves.

The third annual cattle show and fair was held on September 19 and 20. September 19 was, as last year, patients' day, and September 20 was open to the general public. Both days were even more successful, if possible, than in previous years. We all look forward now to patients' fair day as the biggest event of the year, while the general public are looking forward, more and more each year, to the public day. This has created a greater interest in the institution and the work it is attempting than anything else that has been done, resulting in a better understanding, which in turn is bound to result in a greater interest.

The women officers of the colony, anxious to do their part, organized earlier in the year into the Women's League for Soldiers' Aid. Their aim has been to look especially after the men who have gone from here, and, in addition, those men who while not employed at the colony have enlisted from this vicinity. To each man who has enlisted they have given a service kit fully equipped, having made and fitted 130 such. They have made and distributed 30 sweaters and have remembered all with special Christmas packages. To raise money for this they have arranged a series of entertainments, whist parties, etc., at which a small admission fee is charged. I believe, as do the members of the League, that there is a special opportunity for work of this nature, in addition to the large, and more general, effort for the men as a whole.

#### General.

Again this year we set our clocks ahead one hour on April 22, and returned to standard time again on September 1. This daylight-saving plan works out especially well here in an institution isolated as we are. It has many features to recommend it for wider usage.

## FOXBOROUGH STATE HOSPITAL.

Opened in February, 1893. Present capacity, 374; increase for the year, 75.

Valuation of the plant, per capita of capacity, \$1,109; real estate, \$944; personal, \$165.

Daily average number of patients under care, 376; in hospital, 355; on visit or escape, 21.

Number on books Oct. 1, 1917, 363; in hospital, 333; on visit or escape, 30.

All admissions, 40.

Admissions as insane, 40.

First cases of insanity, 21.

Voluntary admissions, 1.

Commitments as inebriate, none.

#### Finances.

Expenditures from maintenance funds, \$153,652; total receipts, \$6,055; being \$920 from private patients, \$4,728 from reimbursing patients, \$407 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$8.36; the same less repairs and improvements, \$8.13.

Weekly per capita cost of whole service, \$3.54; ward service, \$0.91.

One person employed for every 3.20 patients; 1 nurse for every 8.11 patients.

Average monthly wage for all persons employed, \$49.17; for nurses, \$32.35; men, \$34.60; women, \$29.43.

# MENTAL WARDS, STATE INFIRMARY.

Opened in October, 1866. Present capacity, 673.

Daily average number of patients on books, 742; in hospital, 712; on visit or escape, 30.

Number on books Oct. 1, 1917, 734; in hospital, 716; on visit or escape, 18.

All admissions, 41.

Admissions as insane, 41.

Received by transfer, 60.

First cases of insanity, 32.

#### Extract from Superintendent's Annual Report.

The statistics for the department of the insane are for the twelve months ending Sept. 30, 1917.

This department continues to be one of the very important branches of the infirmary. The insane patients form the more permanent element in our population. The general helpfulness of many of these patients in relation to the other parts of the institution is always evident; they themselves are contented and happy, conscious of the fact that they are of real assistance to the institution rather than a burden and a care. In all of the general activities in holiday celebrations, and at entertainments throughout the year, they are always present, and in a larger proportion than from any of the other departments. The general condition of health has been good, and their interests have been carefully looked after, although we have been without medical assistants during nearly half of the year.

#### BRIDGEWATER STATE HOSPITAL.

Opened in September, 1886. Present capacity, 818.

Daily average number of patients on books, 841; in hospital, 838; on visit or escape, 3.

Number on books Oct. 1, 1917, 845; in hospital, 845.

All admissions, 74.

Admissions as insane, 74.

First cases of insanity, 57.

Voluntary admissions, 1.

#### Extract from Medical Director's Annual Report.

The statistical year opened on Oct. 1, 1916, with \$43 patients in the hospital, and closed on Sept. 30, 1917, with a population of \$45. During the twelve months there were 76 patients admitted and 74 were dismissed. The average daily number under treatment was \$37.96, an increase of 10.20 over the preceding year.

The intemperate use of alcohol was shown in the histories of 38 of those first admitted, as a contributing factor, and in 7 as the direct cause, of the existing psychoses. The number of patients giving a history of excessive use of alcohol is undoubtedly greater at this hospital than in other institutions caring for the insane, by reason of the sources from which they are drawn; but the figures suggest the intimate relations between intemperance, crime and insanity.

Of the various forms of mental disease represented in those first admitted, dementia præcox again heads the list with 32 cases, the remaining 25 being rather evenly distributed among the various psychoses as shown in Table No. 6 on the succeeding pages.

Care of the teeth has been given special attention under the direction of Dr. C. A. Porter, who has devoted as much time to the work as his practice in Bridgewater would permit. A dentist who can give the whole or greater part of his time is necessary to carry on the work begun, but owing to the drain coincident to the war dentists are not available, and none has as yet been secured to fill our needs.

All patients and employees of the hospital are now being vaccinated, following an outbreak of typhoid fever in another institution. The value of this procedure as a prophylactic measure requires no comment, and is to be carried on as a part of the general routine in each new admission.

During the year employment has been furnished suited as far as possible to the particular trend of mind and physical fitness of the individual. The enclosed garden, having about 12 acres under cultivation, gave constructive employment in the open air to an average of 60 patients.

Other patients have been occupied in the cleaning and general care of the wards, the preparation and serving of meals, the repair of clothing and mattress making, over 37 per cent. of all patients being thus occupied.

Red Cross knitting has been introduced, and a number of patients have been actively engaged in the making of wristers, mufflers and stockings, evincing a keen interest and spirit of patriotism in doing their bit in the great war.

## MONSON STATE HOSPITAL.

Opened in May, 1898. Present capacity, 967.

Valuation of the plant, per capita of capacity, \$1,029; real estate, \$853; personal, \$176.

Daily average number of patients on books, 1,119; in hospital, 1,031; on visit or escape, 88.

Number on books Oct. 1, 1917, 1,147; in hospital, 1,042; on visit or escape, 105.

All admissions, 236.

Insane admissions, 17; increase for the year, 3.

Sane epileptics admitted, 219; increase for the year, 37. First cases of epilepsy, 194.

# Finances.

Expenditures from maintenance funds, \$297,704; total receipts, \$19,968; being \$9,058 from private patients, \$6,915 from reimbursing patients, \$3,995 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$5.44; the same less repairs and improvements, \$5.26.

Weekly per capita cost of whole service, \$2.16; ward service, \$0.97.

One person employed for every 5.25 patients; 1 nurse for every 9.81 patients.

Average monthly wage for all persons employed, \$49.33; for nurses, \$41.37; men, \$44.14; women, \$38.72.

The general statistics for the year are as follows: --

<sup>2</sup> One sane female discharged from visit, readmitted and died.

# PUBLIC DOCUMENT - No. 117.

1918.]

# Extract from Trustees' Annual Report.

War. — The effects of war are manifest in every phase of our institution life. The increase in cost of all food products, and the difficulty of obtaining some necessaries at any price, made the most careful study necessary in order to keep our patients, of which there was an average of 1,031, reasonably clothed and fed, and still not overrun our appropriation.

Help. — We suffer from the universal difficulty, — help, or labor shortage, — but have managed so far, though our overturn of help is large, and evidence is not wanting that our positions must be made more attractive financially if we are to keep our institutions manned.

## Extract from Superintendent's Annual Report.

During the last year we have arranged for affiliation with Bellevue Hospital for our nurses in their second year. As the matter now stands we have been obliged to send our third-year nurses after they had practically completed their course here; but we are also carrying out the plan to send the second-year nurses, so that in another year the plan will be in full operation, and we shall have at this hospital the first-year and thirdyear nurses, while the second-year nurses will be doing the prescribed work in New York.

An arrangement has been partially made with the State Board of Education for such university extension work as may be needed by the young women who are employed here, who have not had the required first year of high school training. This plan has not been carried out, but seems feasible and would be of very much assistance to the beginners in our training school, and would probably help to provide us with a better supply of nursing material.

During the year the sister of one of our patients has added to Hyde Cottage a sufficiently large annex to provide rooms for her brother. This is now complete, and is occupied by the patient. It makes a very acceptable addition, the patient is more agreeably cared for, and the accommodations for the hospital have been increased.

The gift of cement garden seats, bird baths, vases, fountains, etc. (twenty-five pieces), from the Sideways Studio, through the kindness of Miss Catherine Murphy of Boston, has provided a very good fitting for one of the lawns and for several places where fountains are useful. These pieces also furnish models for a similar line of work, already in hand, by our school workers.

During the year Dr. M. B. Hodskins, as captain, and Dr. H. Caro, as lieutenant, have joined the Medical Officers' Reserve Corps. Dr. D. A. Thom left the year before. This has reduced our medical helpers to a distressing degree. This shortage shows itself not so much in the actual

# 1918.] PUBLIC DOCUMENT — No. 117.

loss of numbers as in the short term of service which we have been able to get. A great many persons have come here only to leave us in a few days to accept a better position. This is a serious disadvantage, as it keeps inexperienced helpers in positions where experience is needed.

The standardization of salaries has been going on under the care of the Supervisor of Administration, and it appears that this will be of material assistance to us when it is once put into operation.

Since the departure of Dr. Thom and Dr. Caro the laboratory work has been considerably curtailed, but the essential parts of it have been carried on by a technician under the direction of Dr. Greene. The X-ray work, formerly carried on by Dr. Hodskins, has also been cared for by Dr. Greene.

The twentieth anniversary articles, which will make a sizable publication, have been accepted by the Commission on Mental Diseases, and will shortly appear in a bulletin of that Board.

MASSACHUSETTS SCHOOL FOR THE FEEBLE-MINDED.

Opened in October, 1848. Present capacity, 1,498, — at Waltham, 1,183; at Templeton, 315.

Valuation of plant, per capita of capacity, \$748; real estate, \$617; personal, \$131.

Daily average number of patients, 1,600; decrease for the year, 11.

Number Oct. 1, 1917, 1,576.

#### Finances.

Expenditures from maintenance funds, \$391,486; total receipts, \$14,569; being \$8,423 from private sources, \$4,171 from reimbursing patients, and \$1,975 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$4.67; the same less repairs and improvements, \$4.50.

Weekly per capita cost of whole service, \$1.59; ward service, \$0.76.

One person employed for every 6.10 patients; 1 nurse for every 9.63 patients.

Average monthly wage for all persons employed, \$42.24; for nurses, \$31.99; men, \$36.28; women, \$31.29.

The general statistics for the year are as follows: --

#### 118

# Extract from Trustees' Annual Report.

In addition to asking for more money, we have tried to see where we could save money by increasing the efficiency of our plants. The suggestion of the superintendent of borrowing land that was at the time non-producing was adopted. In 1916 we had the use of the Metropolitan State Hospital land at Waverley for pasturing; this year we utilized it for cultivation. At the colony at Templeton 15 acres of idle land was borrowed of a neighbor, on which we planted 10 acres of potatoes and 5 acres of turnips. In all we had 156 acres under cultivation, -40 acres at Waverley, double the usual amount, and 116 acres at the colony, an increase over the usual amount. What we raise goes a long way in supplying our 1,700 inmates with healthy, nutritious food. Over and above all that, however, is the constructive occupation given to the able-bodied

boys. We have often spoken of the interest they take in the results of their labor when the groaning wagon loads carry away tons of produce to the cars to be shipped to Waverley.

To-day we are having few applications for the admission of boys of working age. The high wages now being paid result in parents and friends taking good care of them on account of what they can earn and bring into the family purse. In addition to high wages and scarcity of labor, which makes the boy an asset, parents are better informed about the feebleminded and their limitations than formerly, and so are better able to take care of their boys. In Massachusetts a public sentiment, lacking in many other States, is growing up in regard to this subject. The public clinics, the exhibits and the publicity given to the question of the care and custody of the feeble-minded have awakened an interest and started a campaign of education. The part this institution can take through its officers, in awakening the public to their responsibilities and their duties, is fully justified. The result of such an awakening will be the lessening of the number of the feeble-minded, their safer care at home, and the freeing of the State from the care of all but the low grade and the weak.

An advance in the care of our inmates has been made during the year by the establishment of a dental clinic. Every Monday ten new dental students come from Tufts College Dental School and work over the teeth of the children each forenoon. They are all under the expert supervision of Dr. Alfred D. Richburg, from the dental school. This clinic started February 25, and has been very successful. The cost of equipment was \$1,073, with a moderate additional charge for instructor's salary and supplies.

The question has been raised which of the feeble-minded are fit for military work. Twenty-three of our boys have enlisted and been accepted.

#### Extract from Superintendent's Annual Report.

The condition of the labor market has modified the character of the admissions. We are receiving few applications for the admission of adult or adolescent morons of either sex. Defectives who could not have obtained or kept a situation in the past are now eagerly employed at good wages. One mother explained that her son was now doing well at home "because he is now earning \$11 per week, and we look after him and go to the movies with him, and keep him from bad company." In other words, he is now an asset instead of a liability, and so there is an incentive for keeping him out of trouble. Is not this a suggestion worthy of being applied on a larger scale?

For many years we believed that the feeble-minded could not be made self-supporting. This is not true to-day, at least for those taught and trained with the modern vocational methods. As it is now, the older boys at all bright who have friends are removed by these friends to go to work. The boys who resent discipline and institutional life run away and go to

work. The large class of defective boys without runaway tendencies and who have no friends have no such opportunity. When extra institutional help and guidance is provided, many of these cases can safely live in the community with almost no expense to the taxpayer.

The theory and practice of food conservation, now so much discussed, have long been applied in the management of the school. This year we raised more farm and garden crops than ever before. But for the food products raised on our farm, the expense for food would have been greatly increased. At Waltham the scarcity of male help left us with no herdsman and gardener, and with three or four hired men on the farm where we usually had fifteen. But the men we had were greatly interested and loyal, and the male and female physicians, instructors and attendants, with groups and classes of male and female patients, planted, cultivated and harvested the farm and garden crops. On certain days nearly 100 women were happily and effectively working in the gardens with great benefit to their general health. We were unable to employ any men to milk, and the boys have satisfactorily milked the large herd of milch cows.

At Templeton Colony, where there was an even greater shortage of help, the boys seemed to feel a greater responsibility than ever before, and under direction planted an increased acreage, with an abundant harvest.

A large quantity of fruit and vegetables have been canned, preserved, pickled or evaporated for winter use. We hope to greatly add to this type of food conservation in future years, with the proposed addition to our equipment.

The splendid new recreation building for the employees is ready for occupancy, and will do much to make service in this school attractive to desirable people, and thus increase the efficiency of the school.

In the spacious basement of this building we have nearly completed the new arrangements for clinical work. These will provide a large room for the dental clinic, with dispensary for dental supplies; a room splendidly equipped with facilities for minor surgical operations and surgical dressings; a room for sterilization of dressings; a pharmacy and drug storeroom; an X-ray and photograph room; a room for autopsies; a clinical laboratory; and a large waiting room for patients, with toilets, etc. We have sorely needed these facilities for a long time. These clinical facilities were not contemplated in the original appropriation, but by the strictest economy we have been able to add them within the amount appropriated, thus utilizing what would otherwise have been an unoccupied basement.

#### **Out-patient** Clinics.

Out-patient clinics have been continued by the staff of the school, being held at the school at Waverley every Thursday, and in Worcester, Fall River, New Bedford and Newton once each month. Advice is given almost daily by letter and telephone. During the year advice was sought in these clinics for 1,127 persons, and of these 551 were new cases. A thorough mental and psychological examination was made in 469 cases. As a rule, the cases coming to our clinics are not typical cases of feeblemindedness, but are problem cases, where criminalistic, immoral and other anti-social behavior is more pronounced than is the mental lack, and where thorough analysis and long-continued observation and treatment are often necessary before the final prognosis can be furnished and treatment given.

The superintendent delivered 23 public lectures on feeble-mindedness in cities and towns in the State. The superintendent and staff conducted 36 clinics for various college classes and groups of teachers, physicians, social workers, etc.

Fifteen of our officers and attendants have enlisted and are now in the army and navy. Twenty-three of our former patients are also in the service, either in the army or navy.

The shortage of officers and employees has made the year an exceedingly difficult one. At one time in the summer some of our departments had only half the required number of employees. It is a fact that the remuneration offered to institution workers is decidedly less than that which is paid by private business concerns. During the year we have lost many valuable officers because they have been able to get higher wages elsewhere. If the wages of the attendants had not been decidedly increased during the year there would have been no attendants to care for the children.

The educational work of the school has continued without material change in its plan, except that each year we stress more and more the importance of vocational training and of occupational training.

One of the most satisfactory innovations of the year was the opening of the dental clinic conducted, under the auspices of the Tufts College Dental School, by Alfred D. Richburg, D.M.D. This clinic meant that each forenoon a group of ten senior dental students was at the school, and under the expert supervision of Dr. Richburg attended to the muchneeded dental work of the children. During the four months that the clinic was in operation the following work was done: 1,483 fillings, 1,473 extractions and 334 treatments. The services of the clinic will be resumed in a few weeks, when the new department for the dental clinic is ready for use. It is safe to say that at no institution in the world are the teeth of the feeble-minded children being given the attention now received at this school. The resulting improvement in the health and well-being of the patients is most marked.

Our present knowledge as to the number of uncared-for feeble-minded in the State, and their relation to immorality, pauperism, crime and prostitution, and other social problems, shows the need of the following conditions to adequately meet the present needs: --

1. Some definite State authority should have friendly guidance of all mental defectives in the State who are not adequately cared for by their friends. Those who can lead wholesome, harmless lives in the community should be allowed to do so.

2. This central authority should have authority to safeguard in institutions those who need such institutional care.

3. There should be a Statewide census of the feeble-minded.

4. There should be clinics for mental examinations within easy access to all parts of the State.

5. There should be required extension of special classes for mental defectives in the public schools.

6. Special treatment by the courts of defective delinquents, and suitable institutional provision for this class.

7. Development of the third school for the feeble-minded.

## WRENTHAM STATE SCHOOL.

Opened in June, 1907. Present capacity, 1,220; increase for the year, 90.

Valuation of plant, per capita of capacity, \$856; real estate, \$750; personal, \$106.

Daily average number of patients, 1,059; increase for the year, 106.

Number Oct. 1, 1917, 1,097.

#### Finances.

Expenditures from maintenance funds, \$256,945; total receipts, \$2,459; being \$548 from private sources, \$1,050 from reimbursing patients, \$861 from other sources.

Weekly per capita cost of maintenance computed on net expenses, \$4.57; the same less repairs and improvements, \$4.36.

Weekly per capita cost of whole service, \$1.52; ward service, \$0.72.

One person employed for every 6.69 patients; 1 nurse for every 10.19 patients.

Average monthly wage for all persons employed, \$44.45; for nurses, \$32.30; men, \$45.53; women, \$30.95.

#### Extract from Trustees' Annual Report.

Waiving the discussion of the activities of the school during the year, which indeed are so fully set forth in the report of the superintendent as hardly to call for comment, the trustees wish to present their view of the place of the Wrentham school in its relation to the Commonwealth's problem of dealing with the mentally defective. This discussion necessarily broadens beyond the treatment of the feeble-minded, in the ordinary sense of the term, because the school is being used for the custody and care of a distinct class, the disposition of which is a topic of urgent consideration at the present time, — the defective delinquent. That this class is misplaced when committed to a feeble-minded school is acutely realized by all who have concerned themselves with the matter, but seems not to have come to realization by the Legislature, if we may judge by the outstanding fact that the years pass without the provision for it which is clearly indicated.

Even as to the feeble-minded of the kind amenable to the helpful care of a school the Commonwealth seems to have come to a halt. The reasons for the discovery of feeble-minded persons and the passing of them to an institution do not indeed need to be discussed. The State has committed itself to the policy of providing for them in what it has done in the building of schools for their care. The public mind has arrived at a substantial if not a unanimous opinion that such provision is sound and needful policy. The removal of the mentally defective from the community is recognized

as demanded by consideration of the need of the individual, and even more emphatically by calculation of the harm that results to the community itself. Particularly is it seen that the continued freedom from control of the feeble-minded girl and woman of child-bearing age is perilous, and is inviting the rapid accumulation of a problem to harass the State in the future. The economy of the policy of apprehending and controlling those who are freely producing of their kind does not rest in apprehending and controlling a quarter or a half or any less than practically the whole of this part of our population.

The Belchertown school is thus far an area, and no more. It has every possibility of utility, and inasmuch as we, as the Wrentham trustees, have been exercising a sort of trusteeship over it, there may be excuse for offering our opinion that it should be brought into service. Between these extremes of a fully grown institution and one that is chafing in the cradle stands the Wrentham school, with its 500 acres, its many buildings and its inmate population of about 1,200. No one at all conversant with it would say that it had reached the limit of its reasonable development. The trustees, most of whom have been concerned in its progress from the day of its birth, are positive that it has a physical foundation just about two-thirds built upon. With its fundamental cost, that is to say, the investment in the land of its site, already assumed, and with the overhead of institutional direction already created, the obviously practical course for the State is to bring it along to full use. While the further development of Wrentham should not be regarded as an alternative for the building up of Belchertown, it is certainly as clear that a suspension of growth at the former should not accompany the movement for utilization of the tract provided for the third school.

#### Extract from Superintendent's Annual Report.

							138	101	239

Admissions during the Year, Dec. 1, 1916, to Nov. 30, 1917.

The general health of the children during the last year has been good. There were a few sporadic cases of diphtheria, but no epidemics developed.

In order that the health of our children shall be the best all preventive means known to medical science are used. The children have free exercises and play in the open, regular hours for meals and for retiring and arising, good bathing, warm clothing and plenty of nourishing food.

All pupils and employees are required to be vaccinated at entrance to the school against smallpox and inoculated against typhoid. The Schick test, to determine those subject to diphtheria, is being employed, and when the cases who react to this test are ascertained they are to be vaccinated against diphtheria.

The water supply is of first quality and absolutely controlled, it being on the school property in a remote section of a woodland one mile from the institution buildings, and is obtained from driven wells. The water is examined at frequent intervals by the State Department of Health.

The milk supply is produced from our own herd, under the very best conditions, and is also pasteurized.

The care of our children's teeth is an important matter, and in this respect the children have been well looked after since the opening of the institution. At first, when the population was small, a dentist was employed for one day a week, and later, as the institution grew larger, for two days each week. During this last year, however, we have found it necessary to have a dentist devote his entire time to this work.

The children's eyes have been tested and fitted for glasses as needed. Any necessary nose and throat work is also being carefully looked after, and all children suffering from adenoids and enlarged tonsils are having them removed, a large number of the children having been operated on for the removal of adenoids and tonsils during the last year.

The X-ray is used extensively in connection with the dental department, in the treatment of ringworm and in all cases of doubtful diagnosis.

The first step in the care of the children is to place them under the very best physical conditions in having all physical defects removed and corrected as far as possible. The work of training and caring for the feebleminded being primarily a medical problem, the institution is divided into medical districts, each district being under the immediate supervision of an assistant physician. This arrangement places all of the children under medical supervision, — in the schools, on the playgrounds, in the cottages in which they live, at their various occupational activities; in fact, the daily life of the children is closely watched over by a physician.

All of the educational departments have been most active and well co-ordinated. The school proper, including the regular day classes, music, domestic science, physical training, woodworking, and also the industrial educational departments, with the kitchen, dining room, laundry, repair shops and farm and garden, affords training of large numbers of the children along many lines, and for all along some lines.

The surgical dressings department has been added to our school classes.

A room has been fitted up for this work in which one person is employed, and a large number of our girls pass through this room daily, in which they receive splendid training in the accurate work of preparing these dressings. They also receive in this room that which is more important even than hand training, and that is the inspiration that comes to people in the doing of something for the common good.

The games and sports of our school, that form such an important part of our work in being the cement which holds the whole fabric together, have been carried on with the same interest as in previous years.

The general parties at the buildings, the dances, moving pictures, entertainments, birthday parties for the younger children, baseball games, croquet tournaments, picnics, annual fair, as well as the annual celebrations of Fourth of July, Thanksgiving and Christmas, provide something of immediate interest and entertainment for the children at all times.

During the summer one teacher devotes his whole time to the boys' playground, and during the vacation period we have a teacher for playground work with the girls. These teachers in specializing in the playground work have been most helpful in initiating new games and play, and directing the children's interests and activities along the line of healthful sports.

The Massachusetts Commission on Mental Diseases requested that our institution start a small colony on the site for the new institution for feeble-minded at Belchertown. Accordingly, on July 9 we transferred eleven of our boys, under the care of our Mr. and Mrs. Hawes, to the site at Belchertown. There the boys have been happy in the novel experience of colony life far removed from the parent institution. They have been busy in caring for the property and in harvesting and shipping to Wrentham large crops of hay and apples.

Many important improvements have been made during the last year. The playgrounds have been improved by taking out stumps, filling in holes, putting up additional swings, teeter boards and play apparatus. The grading and seeding around the buildings on the north side has been completed, roads and walks built, and a road built connecting the farm group of buildings with the main institution; also the road on the north side has been extended from the buildings to Shears Street, thus making a convenient road for hauling freight and coal from the station. This will divert the heavy traffic from the front entrance of the institution. In the development of the north side of the grounds an out-of-door training yard has been provided for the smaller and lower-grade boys, within easy access of the buildings and yet in a quiet section of the grounds.

One cottage for children and one employees' home have been opened during the year. The cottage that was designed for the accommodation of 105 boys has been opened for the use of girls until such time as the girls' building, now under construction, is completed. The reason for making this change was in response to the urgent demands by the community for the admission of girls to the institution during the last two years. It is noticeable that adolescent and adult boys who could not remain for any length of time in the community without becoming troublesome have, since the beginning of the war, been able to get work and retain their positions fairly well. Such, however, has not been the case with the girls of corresponding age. The disturbed social conditions of the community have brought these girls to the front as never before, and the demand for their protection is most insistent. This is rather suggestive that economic conditions that may prove beneficial to the higher grade defective boy is correspondingly detrimental to the high-grade defective girl in the community.

Training classes for employees have been inaugurated during the year. The course covers a two-year period, and is directed toward giving the employees a thorough knowledge in the care and training of mentally deficient children. It provides a theoretic and practical training for the employees which is going to be very helpful to the institution in the proper care of the children, and will prove equally beneficial to the employees, whether they continue in the service or engage in some other line of activity.

The practice of placing out in the community selected boys and girls has been carried out in a careful and conservative manner. The results so far have been quite satisfactory. Three cases have been returned to the school on account of their needing more supervision than could be provided outside of an institution. The other cases are all doing well. Some of these cases have been away from the institution for two years. I believe this work has been carried on for a long enough period so that it need no longer be considered experimental, but should be recognized as an important department in our institution organization, and at least one employee should devote her entire time to this extra institutional service.

#### THE PRIVATE INSTITUTIONS.

#### THE MCLEAN HOSPITAL.

Opened in October, 1818. Present capacity, 220.

Jan.

#### Extract from Superintendent's Annual Report.

Nineteen men nurses have entered the service directly from the hospital, and 30 other graduate nurses have joined the Colors. Seven of this 30 are physicians and are members of the Medical Officers' Reserve Corps. Twenty-six women graduates are or have been in war service as nurses, and 4 still await mobilization of a psychiatric unit. Most of the men nurses enlisted in the medical department, where they can render their most efficient service. In addition to these, 7 men from other departments have entered the army or navy.

Mention should be made of the great amount of work done by the women of the hospital, who formerly worked for the Allies but whose efforts have been redoubled, since the United States entered the war, in knitting socks, sweaters, helmets, mufflers and other useful articles for our own army and navy. Some of these articles have been sent to individuals in Canada and in France, some have been used to outfit men who enlisted from the hospital and from the village, and the remainder have been sent to the Navy League and the Red Cross. The hospital also has gladly joined in the movement for food conservation by observing wheatless and meatless days, and more recently in a limitation of the use of sugar.

The libraries have been administered with due regard for economy. Many of the periodicals have been discontinued of necessity, because it was impossible to obtain them, others from choice. The total amount expended for books and periodicals for the general medical and the laboratory libraries was \$158.87. One hundred and ninety-four books were added to the patients' library at a cost of \$230.29. There was a saving of \$362.86 in the library account as compared with last year.

Enlistment of one-half the medical staff has limited and will continue to limit the medical work of the hospital, especially in the laboratories. One must be content till a peace is conquered with what is absolutely essential; case-histories may be shorter, records less elaborate, perhaps with judgments given instead of all the data on which such judgments are based; but the medical care and treatment of the patients themselves should not suffer.

The hospital is taking an active part in work for the war. The medical superintendent is chairman of an auxiliary committee of the Council of National Defense; Dr. Packard and Dr. Whitney are members of advisory medical boards; classes in first-aid, under direction of the Red Cross, have been held by Dr. Hoch and Dr. Otis; three members of the medical staff have enlisted in the Medical Officers' Reserve Corps, — Dr. Abbot entering as a captain has been promoted, and is now a major in charge of the Neuropsychiatric Unit of the Base Hospital at Camp Sherman, Ohio; Dr. Otis is a first lieutenant, stationed at Fort Slocum, New York; Dr. Fiege, also a first lieutenant, awaits orders. Dr. Wells, a captain in the Signal Reserve Corps, is president of Aviation Examining Board No. 1, Boston.

# OTHER PRIVATE LICENSED INSTITUTIONS.

Number 28. New licenses were granted during the year as follows: ---

Dr. Francis X. Corr, for the care and treatment of the insane, epileptics, etc., at Arlington Heights, Mass.

For the care and treatment of inebriates, Dr. Wm. B. Keeler, Boston, Dr. Hugh Barr Gray, Boston, Dr. George R. Cate, Brookline, Dr. Charles J. Douglas, Boston, Dr. Earle M. Vrooman, North Adams, Dr. Harry L. Devine, Framingham, and Dr. Maurice C. Gerstein, Boston.

For the care of the feeble-minded, Dr. George A. Brown, Barre, Miss Marion R. Rockwell, Amherst, Miss Elizabeth C. Moulton, Newton, Mrs. Ellen Dresser, Halifax, Mass., and Miss Alice Shovelton, Newton.

On Sept. 30, 1917, there were under care of these institutions 288 patients; the insane numbered 160. There were 214 admissions of the insane, and 25 dismissals during the year.

Thirty-nine visits were made to these institutions by physicians representing the department.

The numbers on Sept. 30, 1917, are set forth in the following tabulation: —

#### UNLICENSED HOMES.

Supervision was continued of unlicensed homes where the insane, feeble-minded, epileptic and persons addicted to the intemperate use of narcotics or stimulants are likely to be found. The requirements of the law were explained in each case.

#### FAMILY CARE OF THE INSANE.

UNDER COMMISSION.

First patient boarded in a family, Aug. 10, 1885. Since placed, 1,276 different patients.

Number in families Oct. 1, 1917, 47 women.

Placed during the year, 6 persons, a decrease of 24.

Daily average number for the year, 57, a decrease of 17.

Passed out of public support: ---

During the year, 2, — one was self-supporting in a family and one was discharged to friends.

Since 1885, 271 different patients, viz.: discharged selfsupporting, 94; discharged to care of friends, 44; self-supporting in families, 82; boarded with friends without public expense, 31; became private patients, 20.

Reappeared under public support: --

During the year, 5; since 1885, 100; 37 per cent.

Number of families having patients, 21, a decrease of 6; 9 families having 1 patient; 3 families, 2; 4 families, 3; 5 families, 4.

Number of cities and towns in which patients are boarded, 3, a decrease of 2.

The general statistics for the year are as follows: ----

### THE COMMISSION.

## PROCEEDINGS.

Thirteen meetings of the Commission were held during the year.

Seventy-one visits of inspection were made by the director and members of the Commission, in addition to 470 by the assistants to the director, pathologist, assistant pathologist, the financial agent and director of industries.

Twenty-one visits were made to the institutions relative to the deportation matters by the assistants to the director. One hundred and eighteen visits relative to matters of support were made to institutions by agents of the support department.

Careful attention has been paid to all complaints as to commitments, discharge, death or treatment of patients.

Mr. Elmer A. Stevens was reappointed member of the Commission.

Mr. Warren A. Merrill was appointed financial agent, succeeding Mr. Elmer R. Libby, whose death occurred in July, 1917.

New licenses were granted during the year as shown on page 129.

#### PLANS AND SPECIFICATIONS

for new construction and additions to existing buildings were examined and approved.

#### ESTIMATES OF STATE EXPENSES FOR 1918

on account of the insane, feeble-minded and epileptic amounted to \$7,360,929.89, including estimates for the maintenance of the insane departments of the State Infirmary and Bridgewater State Hospital, whose estimates are inseparable from those of the institutions as a whole which are supervised by the State Board of Charity. They comprise estimates by the State Board and by the State institutions.

# ESTIMATES BY THE MASSACHUSETTS COMMISSION ON MENTAL DISEASES.

For salaries of officers and employees,	\$71,013
For traveling, office and contingent expenses, including the	
printing and binding of the annual report,	14,885
For transportation and medical examination of State charges	
under the supervision of the Commission,	8,500
For the support of State charges boarded out in families under	
the supervision of the Commission, or temporarily absent	
under authority of same,	9,100
For the support of epileptic State charges in the Hospital Cot-	•
tages for Children,	14,000
For investigation as to the nature, causes, results and treat-	
ment of mental diseases and defect, and the publication of	
the results thereof,	7,275

\$124,773

# ESTIMATES FOR STATE INSTITUTIONS

relate (1) to maintenance expenses, inclusive of repairs and improvements, and (2) to special expenditures for new buildings, additions, new furnishings and equipment in the main.

#### ESTIMATES FOR MAINTENANCE EXPENSES

of the State institutions have been approved by the Commission, as follows: —

#### FAMILY CARE OF THE INSANE.

Under chapter 504, section 71, Acts of 1909, the Commission places in private families certain suitable inmates of the institutions under its supervision.

For a full report of this work as conducted by the Commission and by the trustees of certain institutions, see page 131.

#### THE SUPPORT DEPARTMENT.

It is the duty of this department to ascertain whether the patients committed to the various State hospitals for the insane, and also the institutions for the epileptic and feeble-minded, as public charges have a legal right to remain in said institutions. If they are aliens and have no such right, and have landed in the United States within five years of their commitment, investigation is made as to their liability to deportation under the United States Immigration laws, and the result of such investigation is reported to the Commission. If in the United States more than five years and in Massachusetts less than five years, such aliens are reported for deportation by this Commission. Under the provisions of section 69 of chapter 504 of the Acts of 1909 "the Commission may also remove any pauper inmates of institutions under its supervision who are not subject to the orders of a court to any country, State or place where they belong." If native born and having no claim upon this Commonwealth for support, investigation is made to determine upon what State, if any, they have a claim, and when so determined this is also reported to the Commission for action.

The financial condition of those entitled to remain is investigated, and if there are means legally available and sufficient to warrant it, the patient is reported to the hospital, to be supported privately at a rate to be determined by the hospital authorities. If the means are not sufficient for that purpose, a reimbursing rate is made by this department and submitted to the Commission for approval.

#### DEPORTATIONS.

There were considered for deportation 577 cases, compared with 540 for the previous year. The Commission deported 84 to other States, 9 to other countries, — in all, 93. In addition, the United States Immigration Commissioner deported 33. Altogether, 126 have been deported since Dec. 1, 1916.

Since Oct. 1, 1898, 2,406 persons have been deported by this Commission, of whom 80 returned once, 11 twice and 2 four times. Of those returning, 13 are now in institutions in this State.

Details of the disposition of cases under consideration for deportation are shown in the following table: ---

<sup>1</sup> Decrease.

#### TRANSFERS.

Seven hundred and eighty-two patients have been transferred within the year, — 715 between public institutions; 24 between public institutions and families; 35 between public and private institutions; 8 between private institutions.

#### THE FINANCIAL DEPARTMENT.

The following is submitted as the report of the financial department for the twelve months ending Nov. 30, 1917.

There was expended by the Commission on Mental Diseases for office expenses, travel, transportation, board of patients, etc., \$91,147.76 (see table on page 144); for construction work at the institutions, \$369,711.99 (Special Appropriations, see table on page 195); and by the institutions for maintenance, \$5,181,824.27 (for detail see table on page 186), making a total expenditure of \$5,642,684.02. The receipts by the Commission and institutions were \$438,953.06.

The Legislature of this year appropriated to this Commission the sum of \$564,791.72 for new buildings and repairs, as shown by table on page 191.

#### Combined Purchases.

The year's supply of butter, cotton cloth, eggs and electric lamps was everything that could be bought on a combined purchase for a year. By order of the Food Administrator the butterine contract was reduced from a six to three months' supply. Of the fifty-nine firms approached to bid and deliver coal to the thirteen institutions under the supervision of this Commission not one would submit a bid. Coal, therefore, was bought in the open market until August 1. From then on none could be purchased. About November 1 the condition of some of the institutions became so acute relief was sought from the New England Fuel Administrator. That office has promised to care for the institutions through the coming winter, but indications are that many of the institutions will be carrying along only a few days' supply at a time, whereas they should have enough to last until April.

For complete statistical tables of the workings of the financial department see pages 163 to 201, inclusive.

### GENERAL MATTERS.

NEW LEGISLATION.

The following acts were passed by the Legislature of 1917: ---

GENERAL ACTS, CHAPTER 46.

An Act relative to the Commitment of Persons under Indictment to State Insane Hospitals and to the Removal of Insane Prisoners.

Be it enacted, etc., as follows:

SECTION 1. Section one hundred and three of chapter five hundred and four of the acts of the year nineteen hundred and nine is hereby amended by striking out the last sentence and inserting in place thereof the following: - If a prisoner so removed is, in the opinion of the trustees and superintendent, restored to sanity, they shall so certify upon the commitment, and notice, accompanied by a written statement regarding the mental condition of the prisoner, shall be given to the keeper of the jail or the person having custody of him at the time of the removal, who shall thereupon cause the prisoner to be reconveyed to the jail or custody from which he was removed, where he shall be held in accordance with the terms or process by which he was originally committed or confined, -so as to read as follows: - Section 103. If a person under complaint or indictment for any crime, is, at the time appointed for trial or sentence. or at any time prior thereto, found by the court to be insane or in such mental condition that his commitment to a hospital for the insane is necessary for the proper care or observation of such person pending the determination of his insanity, the court may commit him to a state hospital for the insane under such limitations as it may order. The court may in its discretion employ one or more experts in insanity, or other physicians qualified as provided in section thirty-two, to examine the defendant, and all reasonable expenses incurred shall be audited and paid as in the case of other court expenses. A copy of the complaint or indictment and of the medical certificates attested by the clerk shall be delivered with such person in accordance with the provisions of the said section. If a prisoner so removed is, in the opinion of the trustees and superintendent, restored to sanity, they shall so certify upon the commitment, and notice, accompanied by a written statement regarding the mental condition of the prisoner, shall be given to the keeper of the jail or the person having custody of him at the time of the removal, who shall thereupon cause the prisoner to be reconveyed to the jail or custody from which he was removed, where he shall be held in accordance with the terms or process by which he was originally committed or confined.

#### 152 COMMISSION ON MENTAL DISEASES. [Jan.

SECTION 2. Section one hundred and six of said chapter five hundred and four, as amended by section one of chapter one hundred and twentytwo of the acts of the year nineteen hundred and ten, is hereby further amended by striking out the last sentence and inserting in place thereof the following: - If a prisoner so removed is, in the opinion of the trustees and superintendent of the hospital, restored to sanity, they shall so certify upon the commitment, and notice, accompanied by a written statement regarding the mental condition of the prisoner, shall be given to the jailor, master or superintendent of the jail, house of correction or prison, who shall thereupon cause the prisoner to be reconveyed to the jail, house of correction or prison, there to remain pursuant to the original sentence, computing the time of his detention or confinement in the hospital as a part of the time of his imprisonment, - so as to read as follows: - Section 106. If a prisoner under sentence in a jail, house of correction, or prison other than those named in the preceding section, appears to be insane, the physician in attendance shall make a report thereof to the jailor or master who shall transmit the same to one of the judges mentioned in section twenty-nine. If the judge finds in accordance with the provisions of sections eleven, twenty-nine and thirty that the prisoner is insane and that his removal is expedient, he shall order the removal of such prisoner, if a male to the Bridgewater state hospital, if a female to one of the other state hospitals for the insane, pursuant to the provisions of said sections: provided, that if a male prisoner has not been criminal and vicious in his life the judge may order him removed to one of the other state hospitals for the insane. A physician, other than the physician in attendance at the place of detention, making the certificate, shall be entitled to the compensation provided by section forty-eight. If a prisoner so removed is, in the opinion of the trustees and superintendent of the hospital, restored to sanity, they shall so certify upon the commitment, and notice, accompanied by a written statement regarding the mental condition of the prisoner, shall be given to the jailor, master or superintendent of the jail, house of correction or prison, who shall thereupon cause the prisoner to be reconveyed to the jail, house of correction or prison, there to remain pursuant to the original sentence, computing the time of his detention or confinement in the hospital as a part of the time of his imprisonment.

SECTION 3. This act shall take effect upon its passage. [Approved March 8, 1917.

#### GENERAL ACTS, CHAPTER 48.

AN ACT RELATIVE TO TEMPORARY ABSENCE BY PERMISSION FROM INSTI-TUTIONS UNDER THE SUPERVISION OF THE COMMISSION ON MENTAL DISEASES.

#### Be it enacted, etc., as follows:

SECTION 1. Section seventy-five of chapter five hundred and four of the acts of the year nineteen hundred and nine, as extended by chapter two hundred and thirty-nine of the General Acts of the year nineteen hun-

#### 1918.] PUBLIC DOCUMENT — No. 117. 153

dred and sixteen, is hereby amended by striking out the word "six", where it occurs in the fifth and nineteenth lines, and inserting in place thereof the word: - twelve, - so as to read as follows: - Section 75. The superintendent or manager of any hospital or receptacle described in section seven may permit any inmate thereof temporarily to leave such institution in charge of his guardian, relatives, friends, or by himself, for a period not exceeding twelve months, and may receive him when returned by any such guardian, relative, friend, or upon his own application, within such period. without any further order of commitment. The superintendent may require as a condition of such leave of absence, that the person in whose charge the patient is permitted to leave the institution shall make reports to him of the patient's condition. Any such superintendent, guardian, relative or friend may terminate such leave of absence at any time and authorize the arrest and return of the patient. The officers mentioned in section eighty-six shall cause such a patient to be arrested and returned upon the request of any such superintendent, guardian, relative or friend. Any patient who has not returned to the institution at the expiration of twelve months shall be deemed to be discharged therefrom.

SECTION 2. This act shall take effect upon its passage. [Approved March 8, 1917.

#### GENERAL ACTS, CHAPTER 50.

#### An Act to provide for the Instruction of Nurses, Attendants and Patients in Certain State Institutions.

#### Be it enacted, etc., as follows:

SECTION 1. Section one of chapter six hundred and forty-nine of the acts of the year nineteen hundred and eleven is hereby amended by striking out the said section, and inserting in place thereof the following: — Section 1. The trustees of the state institutions under supervision of the commission on mental diseases shall cause to be given to the nurses, attendants and patients of said institutions instruction in such arts, crafts, manual training, kindergarten and other branches and lines of occupation as may be appropriate for the patients of the said institutions to undertake, especially such patients as are physically unfit to perform the usual work in or about the institutions.

SECTION 2. This act shall take effect upon its passage. [Approved March 8, 1917.

#### GENERAL ACTS, CHAPTER 69.

AN ACT RELATIVE TO THE COMMITMENT OF DIPSOMANIACS AND OTHERS. Be it enacted, etc., as follows:

SECTION 1. Section fifty of chapter five hundred and four of the acts of the year nineteen hundred and nine, as amended by chapter five hundred and fifty-eight of the acts of the year nineteen hundred and fourteen, and by chapter seventy-three of the General Acts of the year nineteen hundred

### 154 COMMISSION ON MENTAL DISEASES. [Jan.

and fifteen, is hereby further amended by striking out the said section and inserting in place thereof the following: - Section 50. Any of the judges named in section twenty-nine, and the justices of the municipal court of the city of Boston, may commit to the Norfolk state hospital, the McLean hospital or to a private licensed hospital or house, any male, or to any hospital or licensed receptacle for the insane, public or private, except the Norfolk state hospital, any female, who is subject to dipsomania or inebriety either in public or private, or who is so addicted to the intemperate use of narcotics or stimulants as to have lost the power of selfcontrol: but no such commitment shall be made until satisfactory evidence is presented to the judge by whom the proceedings are heard that such person is not of bad repute or of bad character apart from such habits of intemperance. The magistrate who receives the application for such commitment shall examine on oath the applicant and all other witnesses, shall reduce the application to writing and cause it to be subscribed and sworn to by the applicant. He shall cause a summons and copy of the application to be served upon such person in the manner provided by section twenty-five of chapter two hundred and seventeen of the Revised Laws. Such person shall be entitled to a hearing, unless after receiving said summons he shall in writing waive a hearing; and in that case the magistrate may issue an order for his immediate commitment as aforesaid, without a hearing, if he is of opinion that such person is a proper subject for treatment and custody in the hospital or other place to which he is committed. The commitment may be made forthwith, if the examining physician certifies the case to be one of emergency. A person committed as aforesaid may be detained for two years from the date of his commitment, and no longer.

SECTION 2. This act shall take effect upon its passage. [Approved March 14, 1917.

#### GENERAL ACTS, CHAPTER 115.

#### An Act to provide for the Development and Statewide Extension of the Psychopathic Hospital Service.

#### Be it enacted, etc., as follows:

SECTION 1. The commission on mental diseases is hereby authorized to develop; extend and complete a statewide system of psychopathic hospital service by establishing new hospital and out-patient units in suitable districts in connection with existing or future state hospitals under the supervision of said commission. The administration of the separate new district units and the appropriations granted therefor shall be in accordance with laws governing the state hospitals to which the land, buildings and furnishing of said units shall appertain. The direction of the scientific work in the proposed new units, together with that of the psychopathic department of the Boston state hospital already established under the provisions of chapter four hundred and seventy of the acts of the year nineteen hundred and nine, shall be vested in the commission on mental diseases by means of its duly appointed agents, and said commission shall provide, out of the appropriation for the department, for the salaries and wages of directing and investigative officers and employees and for the expenses of investigation of the nature, causes, treatment and results of mental disease and defect.

SECTION 2. This act shall take effect upon its passage. [Approved March 29, 1917.

#### GENERAL ACTS, CHAPTER 131.

AN ACT TO AUTHORIZE THE COMMISSION ON MENTAL DISEASES TO PROVIDE FOR THE INTERSTATE TRANSFER OF INDIGENT INSANE PERSONS.

#### Be it enacted, etc., as follows:

SECTION 1. Chapter five hundred and four of the acts of the year nineteen hundred and nine, as amended in section sixty-nine, by section one of chapter three hundred and thirty-four of the acts of the year nineteen hundred and eleven, is hereby further amended by striking out the said section sixty-nine, and inserting in place thereof the following: ----Section 69. The commission on mental diseases may, subject to the provisions of section seventy, transfer to and from any institution or receptacle under its supervision, any inmate thereof who, in the opinion of the commission, is a proper subject for admission to the institution or receptacle to which he is to be transferred: provided, that no such inmate shall be transferred to be detained as an insane person unless he shall have been duly committed as insane by a judge or court; and provided, further, that no person shall so be transferred to the Bridgewater state hospital unless he has been a criminal and vicious in his life. A record of such transfer shall be entered in the registers of the institutions to and from which he is transferred. The commitment papers, together with an abstract of his hospital case-record, shall be transmitted with him to the institution to which he is transferred. The commission may also remove any pauper inmates of institutions under its supervision, who are not subject to the orders of a court, to any country, state or place where they belong. The commission may also enter into an agreement with the corresponding board or commission of any other state for the transfer of indigent insane from one state to the other where they, after a full investigation of all the facts in each case, may be deemed equitably to belong. In making such transfers and removals the commission shall, so far as is practicable, employ nurses or attendants instead of officers of the law, and shall employ female nurses or attendants to accompany female patients.

SECTION 2. This act shall take effect upon its passage. [Approved April 3, 1917.

#### GENERAL ACTS, CHAPTER 133.

#### AN ACT RELATIVE TO THE SUPPORT OF INMATES IN INSTITUTIONS UNDER THE SUPERVISION OF THE COMMISSION ON MENTAL DISEASES.

#### Be it enacted, etc., as follows:

SECTION 1. Section eighty-two of chapter five hundred and four of the acts of the year nineteen hundred and nine, as amended by section one of chapter two hundred and eight of the General Acts of the year nineteen hundred and fifteen, is hereby further amended by striking out the said section and inserting in place thereof the following: - Section 82. The trustees of the institutions mentioned in section fourteen, and of the Massachusetts School for the Feeble-Minded, may, directly or through an authorized agent or agents, make contracts fixing the price for the support of inmates, at a sum not less than six dollars per week, and binding the persons making such contracts to payment thereunder. The price for the support of inmates for whose support such a contract is not made, or of inmates payments for whose support under such contracts are in default, and for insane inmates of the state infirmary and insane inmates of the Bridgewater state hospital, not under orders of a court, shall be determined by the commission on mental diseases at a sum not exceeding six dollars per week for each person, and may be recovered of such persons or of the husband, wife, father, mother, grandfather, grandmother, child or grandchild if of sufficient ability. A married woman shall be subject to the said liability as though sole. Such action shall be brought by the attorneygeneral in the name of the treasurer and receiver general.

Any person making payment for such support may by suit in equity in the superior court, to which any or all of the classes of persons hereinbefore named may be made parties, regardless of the existence of the marriage relation, recover the same from any person primarily liable for such support, or have the amount so paid apportioned among those who are not primarily liable, in proportion to their ability, respectively, to pay, and may recover such apportionment.

Any guardian or conservator of such an inmate who, having property of his ward in his possession or control exceeding two hundred dollars in value, fails to pay, within three months after receipt of any bill therefor, for his support at the rate determined by the commission on mental diseases, shall, upon application of the attorney-general, forthwith be removed.

In all proceedings under this section the sworn statement of a person that he is the superintendent of one of said institutions, or keeps or has custody of the records thereof or of the records of the commission on mental diseases, and that a certain person has been an inmate of said institution during a certain period of time, or that the price of the support of a certain inmate has been determined at a certain sum by the commission on mental diseases, shall be prima facie evidence of the said facts.

SECTION 2. This act shall take effect upon its passage. [Approved April 3, 1917.

#### 1918.]

#### GENERAL ACTS, CHAPTER 223.

AN ACT RELATIVE TO THE COMMITMENT OF FEEBLE-MINDED PERSONS AND THEIR ADMISSION (INTO CERTAIN STATE INSTITUTIONS.

#### Be it enacted, etc., as follows:

SECTION 1. Section sixty-three of chapter five hundred and four of the acts of the year nineteen hundred and nine, as amended by section one of chapter one hundred and twenty-two of the General Acts of the year nineteen hundred and sixteen, is hereby further amended by adding at the end thereof the following: — The order of commitment shall also direct the sheriff, deputy sheriff, constable, police officer, or other person, as the case may be to apprehend and convey the feeble-minded person to the institution to which he has been committed.

SECTION 2. Said chapter five hundred and four, as amended in section sixty-four by section two of said chapter one hundred and twenty-two is hereby further amended by striking out the said section sixty-four and inserting in place thereof the following: - Section 64. The trustees of said institutions may, at their discretion, receive any feeble-minded person from this commonwealth upon application being made therefor by the parent or guardian of such person, which application shall be accompanied by the certificate of a physician, qualified as provided in section thirtytwo, that such person is deficient in mental ability, and that in the opinion of the physician he is a fit subject for said school. A physician who makes the said certificate shall have examined the alleged feeble-minded person within five days of his signing and making oath to the certificate. The trustees of said institution may also, at their discretion, receive any person from this commonwealth upon the written request of his natural or legal guardian, and may detain him for observation for a period not exceeding thirty days, to determine if he is feeble-minded.

SECTION 3. This act shall take effect upon its passage. [Approved May 4, 1917.

#### GENERAL ACTS, CHAPTER 232.

AN ACT RELATIVE TO THE LICENSING OF PRIVATE HOSPITALS AND THE Admission therein of Certain Patients.

#### Be it enacted, etc., as follows:

SECTION 1. Chapter two hundred and eighty-five of the General Acts of the year nineteen hundred and sixteen is hereby amended by striking out section six and inserting in place thereof the following: — Section 6. The commission may annually license any suitable person to establish or have charge of a hospital or private house for the care and treatment of the insane, epileptic, feeble-minded, and persons addicted to the intemperate use of narcotics or stimulants, and may at any time revoke the license. No such license shall be granted for the care and treatment of insane or epileptic persons unless the said commission is satisfied, after investigation, that the person applying therefor is a duly qualified physician, as provided in section thirty-two of chapter five hundred and four of the acts of the year nineteen hundred and nine, and has had practical experience in the care and treatment of such patients. No such license shall be granted for the care and treatment of persons addicted to the intemperate use of narcotics or stimulants unless the commission is satisfied, after investigation, that the person applying therefor is a physician who is a graduate of a legally chartered medical school or college; that he has been in the actual practice of medicine for the three years next preceding his application for a license, nor unless his standing, character and professional knowledge of inebriety are satisfactory to the commission. Licenses granted hereunder shall expire with the last day of the calendar year in which they are issued, but may be renewed. The commission shall have power to fix reasonable fees for said licenses and renewals thereof.

SECTION 2. Said chapter two hundred and eighty-five is hereby further amended by striking out section seven and inserting in place thereof the following: — Section 7. Whoever keeps or maintains a hospital or private house for the care or treatment of the insane, epileptic, feeble-minded or persons addicted to the intemperate use of narcotics or stimulants, unless the same is in charge of and under the direct personal supervision of, a person duly licensed under this act, shall be guilty of a misdemeanor, and shall be punished by a fine of not more than five hundred dollars.

The superintendent or manager of any hospital or private Section 3. house licensed for the care and treatment of persons addicted to the intemperate use of narcotics or stimulants may, when requested by a physician, by a member of the board of health or a police officer of a city or town, by an agent of the institutions registration department of the city of Boston, by a member of the district police, or by the wife, husband, guardian or, in the case of an unmarried person having no guardian, by the next of kin, receive and care for in such hospital, as a patient for a period not exceeding fifteen days, any person who needs immediate care and treatment because he has become so addicted to the intemperate use of narcotics or stimulants that he has lost the power of self-control. Such request for the admission of a patient shall be made in writing and filed at the hospital at the time of his reception, or within twenty-four hours thereafter, together with a statement, in a form prescribed by the commission, giving such information as the commission may deem appropriate. The trustees, superintendent or manager of such hospitals or private houses shall cause to be kept a record, in such form as the commission may require, of each case treated therein, which shall at all times be open to the inspection of the commission and its agents. Such records shall not be a public record, nor shall the same be received as evidence in any legal proceeding. The superintendent or manager of such a hospital shall not detain any person received as above for more than fifteen days, unless, before the expiration of that period, such person shall have been committed under the provisions of section fifty of chapter five hundred and four of the acts of the year nineteen hundred and nine, as amended by

#### 1918.] PUBLIC DOCUMENT — No. 117.

chapter seventy-three of the General Acts of the year nineteen hundred and fifteen, or has signed a request to remain under the provisions of section fifty-four of said chapter five hundred and four. [Approved May 9, 1917.

#### GENERAL ACTS, CHAPTER 278.

# An Act relative to the Filing of Estimates calling for Appropriations.

#### Be it enacted, etc., as follows:

SECTION 1. Section three of chapter seven hundred and nineteen of the acts of the year nineteen hundred and twelve, as affected by chapter two hundred and ninety-six of the General Acts of the year nineteen hundred and sixteen, is hereby amended by striking out the word "November", in the sixth line, and inserting in place thereof the word: - October, - and by inserting after the word "preceding", in the twelfth and thirteenth lines, the words: - Duplicate copies of the said statements shall be filed at the same time with the supervisor of administration, - so as to read as follows: -- Section 3. Every officer or board having charge of any department, institution or undertaking which receives an annual appropriation of money from the treasury of the commonwealth, including annual appropriations to be met by assessments, shall, annually, on or before the fifteenth day of October, submit to the auditor of the commonwealth, statements showing in detail the amounts appropriated for the current fiscal year, estimates of the amounts required for the ensuing fiscal year with an explanation of the reason for any increased appropriation, and with citations of the statutes relating thereto, and the expenditures for the current year and for each of the two years next preceding. Duplicate copies of the said statements shall be filed at the same time with the supervisor of administration. The said estimates shall not include any estimates for special purposes or objects. The auditor, on or before the fifteenth day of December in each year, shall submit to the governor elect and to the supervisor of administration, copies of the amounts so required by such departments, institutions or undertakings, together with a statement of the general appropriations for said departments, institutions or undertakings of the preceding fiscal year and the expenditures for the same and the unexpended balance as of the preceding thirtieth of November. The auditor shall further embody the statements received from those in charge of such departments, institutions or undertakings, together with his estimates for the ensuing fiscal year for the ordinary and other revenue of the commonwealth, in one document, and shall have the document printed and shall transmit the same to the general court for its action on or before the first Thursday of January of each year. Copies of this document shall be distributed to the members of the general court.

SECTION 2. Section four of said chapter seven hundred and nineteen, as affected by said chapter two hundred and ninety-six, is hereby amended by inserting after the word "objects", in the fourth line, the words: — or

who recommend changes in existing laws or new laws requiring new appropriations or appropriations which exceed the amounts called for in accordance with the provisions of section three of this act, --- and by striking out the word "November", in the eighth line, and inserting in place thereof the word: - October, - so as to read as follows: - Section 4. Officers, heads of departments, boards, commissions and trustees of institutions, who, in their annual reports, or otherwise, recommend appropriations from the state treasury for special purposes or objects, or who recommend changes in existing laws or new laws requiring new appropriations or appropriations which exceed the amounts called for in accordance with the provisions of section three of this act, including appropriations to be met by assessments, in addition to the ordinary running expenses, shall submit estimates thereof in detail to the auditor of the commonwealth on or before the fifteenth day of October in each year, and he shall classify and submit them to the governor elect and to the supervisor of administration for their examination on or before the fifteenth day of December next succeeding, and shall have them printed in a public document, and shall transmit the same to the general court on or before the first Thursday of January of each year for its action. [Approved May 23, 1917.

#### SPECIAL APPROPRIATIONS.

The special appropriations for the year 1917, and for nine, ten and nineteen year periods, are shown in the following tables:—

	1917.	Nine Years, ending <b>1917.</b>	Ten Years, ending 1908.	Nineteen Years, ending <b>1917.</b>

## DIRECTORY OF INSTITUTIONS.

PUBLIC.

WORCESTER STATE HOSPITAL (opened 1833): ---

- Trustees: Miss Georgie A. Bacon, Worcester, chairman; Donald Gordon, Boston, clerk; Mrs. Ellen A. Sheehan, Worcester; Amos B. Chase, Lynn; William J. Delahanty, M.D., Worcester; John G. Perman, D.D., Worcester; Edward F. Fletcher, Worcester.
- Regular meeting, first Tuesday of each month.
- Superintendent and treasurer, Ernest V. Scribner, M.D.

Assistant superintendent, B. Henry Mason, M.D.

Assistant physicians, Donald R. Gilfillan, M.D., Arthur H. Mountford, M.D., Clarence A. Bonner, M.D., James T. Adams, M.D., John C. Lindsay, M.D., Marie S. Lindsay, M.D., Charles A. Benway, M.D.

Pathologist, -----.

Steward, Arthur E. Gilman.

Visiting days, daily, 10 A.M. to 12 M., and 1 to 4 P.M.

Staff meetings, daily, 8.30 A.M.

Location, Belmont Street, Worcester, one and one-half miles from Union Station (Boston & Albany, New York, New Haven & Hartford and Boston & Maine).

TAUNTON STATE HOSPITAL (opened 1854): --
